Cognitive Infocommunications, Theory and Applications Ryszard Klempous, Jan Nikodem, Péter Zoltán Baranyi, 2018-08-25
The book gathers the chapters of Cognitive InfoCommunication research relevant to a variety of application areas including data visualization emotion expression brain computer interfaces or speech technologies It provides an overview of the kind of cognitive capabilities that are being analyzed and developed Based on this common ground it may become possible to see new opportunities for synergy among disciplines that were heretofore viewed as being separate Cognitive InfoCommunication begins by modeling human cognitive states and aptitudes in order to better understand what the user of a system is capable of comprehending and doing The patterns of exploration and the specific tools that are described can certainly be of interest and of great relevance for all researchers who focus on modeling human states and aptitudes This innovative research area provides answers to the latest challenges in influence of cognitive states and aptitudes in order to facilitate learning or generally improve performance in certain cognitive tasks such as decision making Some capabilities are purely human while others are purely artificial but in general this distinction is rarely clear cut Therefore when discussing new human cognitive capabilities the technological background which makes them possible cannot be neglected and indeed often plays a central role This book highlights the synergy between various fields that are perfectly fit under the umbrella of CogInfoCom and contribute to understanding and developing new human artificial intelligence hybrid capabilities These merged capabilities are currently appearing and the importance of the role they play in everyday life are unique to the cognitive entity generation that is currently growing up Translation Quality Assessment Joss Moorkens, Sheila Castilho, Federico Gaspari, Stephen Doherty, 2018-07-13 This is the first volume that brings together research and practice from academic and industry settings and a combination of human and machine translation evaluation Its comprehensive collection of papers by leading experts in human and machine translation quality and evaluation who situate current developments and chart future trends fills a clear gap in the literature This is critical to the successful integration of translation technologies in the industry today where the lines between human and machine are becoming increasingly blurred by technology this affects the whole translation landscape from students and trainers to project managers and professionals including in house and freelance translators as well as of course translation scholars and researchers The editors have broad experience in translation quality evaluation research including investigations into professional practice with qualitative and quantitative studies and the contributors are leading experts in their respective fields providing a unique set of complementary perspectives on human and machine translation quality and evaluation combining theoretical and applied approaches Instinctive Computing Yang Cai, 2017-01-09 This book attempts to connect artificial intelligence to primitive intelligence It explores the idea that a genuinely intelligent computer will be able to interact naturally with humans To form this bridge computers need the ability to recognize understand and even have instincts similar to humans The author

organizes the book into three parts He starts by describing primitive problem solving discussing topics like default mode learning tool making pheromones and foraging Part two then explores behavioral models of instinctive cognition by looking at the perception of motion and event patterns appearance and gesture behavioral dynamics figurative thinking and creativity The book concludes by exploring instinctive computing in modern cybernetics including models of self awareness stealth visual privacy navigation autonomy and survivability Instinctive Computing reflects upon systematic thinking for designing cyber physical systems and it would be a stimulating reading for those who are interested in artificial intelligence cybernetics ethology human computer interaction data science computer science security and privacy social media or autonomous robots
