Engineering Mechanics: Static James L. Meriam,1997 *Approaching Human Performance* Markus Grebenstein,2014-01-24 Humanoid robotics have made remarkable progress since the dawn of robotics So why don t we have humanoid robot assistants in day to day life yet This book analyzes the keys to building a successful humanoid robot for field robotics where collisions become an unavoidable part of the game The author argues that the design goal should be real anthropomorphism as opposed to mere human like appearance He deduces three major characteristics to aim for when designing a humanoid robot

particularly robot hands Robustness against impacts Fast dynamics Human like grasping and manipulation performance Instead of blindly copying human anatomy this book opts for a holistic design methodology It analyzes human hands and existing robot hands to elucidate the important functionalities that are the building blocks toward these necessary characteristics They are the keys to designing an anthropomorphic robot hand as illustrated in the high performance anthropomorphic Awiwi Hand presented in this book This is not only a handbook for robot hand designers It gives a comprehensive survey and analysis of the state of the art in robot hands as well as the human anatomy It is also aimed at researchers and roboticists interested in the underlying functionalities of hands grasping and manipulation The methodology of functional abstraction is not limited to robot hands it can also help realize a new generation of humanoid robots to accommodate a broader spectrum of the needs of human society
