[A Case Against Accident and Self-organization](#) Dean L. Overman, 2001-04-11 In this illuminating book Dean L Overman uses logical principles and mathematical calculations to answer the questions that have long perplexed biologists and astrophysicists Is it mathematically possible that accidental processes caused the formation of the first form of living matter from non living matter Could accidental processes have caused the formation of a universe compatible with life Are current self organization

scenarios for the formation of the first living matter plausible Overman reviews the influence of metaphysical assumptions in logical analysis and discusses the principles of logic applicable to these questions examining the limitations of verbal and mathematical logic He proceeds to demonstrate that it is mathematically impossible that accidental processes produced the first living matter The author also examines other issues related to the creation of the universe including Stephen Hawking's no boundary proposal the need for a Creator as the preserving cause of the universe and the explanations offered by the weak and strong anthropic principles Acclaimed by theologians and scientists alike as well argued coherent and persuasive A Case Against Accident and Self Organization is a fascinating study of the origins of life and our universe **Modern**

Reconstruction Vincent Frank Bedogne, 2010-04-14 Inspired by a vision of soaring towers high speed transit cars pristine skies and blossoming gardens we move beyond today's automobile based urban model and embrace a design where the freedom of the individual is paramount and the human energy that defines city life flows unimpeded within an urban matrix engineered to allow for its highest expression Author Vincent Frank Bedogne drafts a blueprint for what humanity's Evolution of Consciousness and adoption of Economics of Fulfillment make it possible to achieve perfection of life on earth We draw a plan for reconstruction of the earth's urban and ecological infrastructure the city of tomorrow the countryside of tomorrow how we will get around and communicate We embrace a new environmentalism explore future sources of energy

reveal the solution to humanity's present energy crisis and look at how we will build to withstand the climatic rigors imposed by a biosphere in evolution *Mathematical Physics for Nuclear Experiments* Andrew E. Ekpenyong, 2022-01-20

Mathematical Physics for Nuclear Experiments presents an accessible introduction to the mathematical derivations of key equations used in describing and analysing results of typical nuclear physics experiments. Instead of merely showing results and citing texts, crucial equations in nuclear physics such as the Bohr's classical formula, Bethe's quantum mechanical formula for energy loss, Poisson, Gaussian and Maxwellian distributions for radioactive decay and the Fermi function for beta spectrum analysis among many more are presented with the mathematical bases of their derivation and with their physical utility. This approach provides readers with a greater connection between the theoretical and experimental sides of nuclear physics. The book also presents connections between well-established results and ongoing research. It also contains figures and tables showing results from the author's experiments and those of his students to demonstrate experimental outcomes. This is a valuable guide for advanced undergraduates and early graduates studying nuclear instruments and methods, medical and health physics courses as well as experimental particle physics courses. Key features: Contains over 500 equations connecting theory with experiments. Presents over 80 examples showing physical intuition and illustrating concepts. Includes 80 exercises with solutions showing applications in nuclear and medical physics. *Commonsense Guide to Current Affairs* Vincent Frank Bedogne, Marcy Jean Everest, 2009-08-01. From clones, family abortion, terrorism and the concept of the collective to economics, nuclear power, cap and trade, renewable energy and the politics of climate change, Everest and Bedogne do something much needed and remarkably absent in today's media. They strip away the layers of liberal and conservative ideology to look at the most talked-about topics of our time from the standpoint of what the politicians have forgotten: common sense. Brought to light by logic, history and science, the book filters the issues that in today's world every citizen, student and educator needs to understand through what we know to be sound, that which we have gained through our day-to-day trials, our all too often repressed ability to see things in a practical and matter-of-fact way. *World of Chemistry* Robyn V. Young, 2000. Articles on theories, discoveries, concepts and notable people in chemistry. *Subject Guide to Books in Print*, 1996. *American Journal of Physics*, 2000. *Books in Print Supplement*, 2002. **The New Encyclopaedia Britannica: Macropaedia : Knowledge in depth**, 2003. *Books in Print*, 1991. *The New Encyclopædia Britannica: Macropædia*, 1993. This encyclopedia includes a two-volume index, a 12-volume Micropaedia, Ready reference, a 17-volume Macropaedia, Knowledge in depth and the Propaedia.
