ATOMS AND ELECTRONS STUDY GUIDE

Learning Goals: (1) (10-11 P. 41) Explain a new scientific theory of atoms (the modern atomic theory) by describing changes in the atomic model over time, including those changes based on experimental observations. (10-11 P. 42) Explain the scientific theory of atoms (the modern atomic theory) by describing the scientific changes in terms of changing scientific understandings, including scientific theory that led to the modern atomic theory, including changes and evidence within the atom. (10-11 P. 42) Explain properties of atoms and their placement within periodic table, forming connections of their properties related to their placement in the periodic table, including atomic number, mass number, chemical properties, physical properties, and other properties.

ANSWER KEY

Directions: Match the atomic theory selected on the correct understanding.

Model	Scientist	Atomic Theory
1	Democritus (460 BC)	A. Everything is made of atoms that cannot be created, divided or destroyed.
2	Bohr (1913)	B. Matter is made of atoms, which are made of positively charged nuclei, surrounded with electrons arranged in concentric shells.
3	Rutherford (1911)	C. Atoms are indivisible particles.
4	Thomson (1897)	D. Group Number = Valency Element
5	Moseley (1913)	E. Electrons move
6	Schrodinger (1926)	F. Atoms are mostly empty space, the subatomic particles move.

Directions: Use the periodic table to answer the following questions:

- 10-11 P. 41** The number of protons equals the number of electrons.
- Atomic number of an element will equal the **number of protons**.
- 10-11 P. 41** **10-11 P. 41** protons are positive (positively charged) and electrons are negative (negatively charged).

Electrons In Atoms Guided Practice Problems Answers:

Survival Guide to General Chemistry Patrick E. McMahon, Rosemary McMahon, Bohdan Khomtchouk, 2019-02-13 This work evolved over thirty combined years of teaching general chemistry to a variety of student demographics. The focus is not to recap or review the theoretical concepts well described in the available texts. Instead, the topics and descriptions in this book make available specific detailed step by step methods and procedures for solving the major types of problems in general chemistry. Explanations, instructional process sequences, solved examples, and completely solved practice problems are greatly expanded, containing significantly more detail than can usually be devoted to in a comprehensive text. Many chapters also provide alternative viewpoints as an aid to understanding. Key Features: The authors have included every major topic in the first semester of general chemistry and most major topics from the second semester. Each is written in a specific and detailed step by step process for problem solving, whether mathematical or conceptual. Each topic has greatly expanded examples and solved practice problems containing significantly more detail than found in comprehensive texts. Includes a chapter designed to eliminate confusion concerning acid base reactions, which often persists through working with acid base equilibrium. Many chapters provide alternative viewpoints as an aid to understanding. This book addresses a very real need for a large number of incoming freshmen in STEM fields. *The Practice of Chemistry Study Guide & Solutions Manual* Pamela Mills, Amina El-Ashmawy, 2003-04-14 Designed to help students understand the material better and avoid common mistakes. Also includes solutions and explanations to odd numbered exercises.
