Natural Fibre Reinforced Polymer Composites Sabu Thomas, Laly A. Pothan, 2009 **Phase change materials microcapsules reinforced with graphene oxide for energy storage technology** Bowei Du, Mingyue Wang, Qing Zhao, Xiaofei Hu, Shujiang Ding, 2023-05-29

Phase change materials (PCMs) are considered one of the most promising energy storage methods owing to their beneficial effects on a larger latent heat, smaller volume change, and easier controlling than other materials. PCMs are widely used in solar energy heating, industrial waste heat utilization, energy conservation in the construction industry, and other fields. To avoid leakage, phase separation, and volatile problems of PCMs, the encapsulation technique typically uses organic polymer materials as shell structures of microcapsules. Furthermore, using inorganic materials to enhance the thermal property of phase change microcapsules is a popular approach in recent research. Especially, graphene oxide (GO) with high thermal conductivity was used as a common thermal conducting additive to improve the thermal performance of phase change microcapsules. Due to its amphiphilic property, GO combined with PCM microcapsules can achieve a variety of nanostructures for thermal energy storage. In this paper, four aspects have been summarized: configuration of PCMs, methods of combining GO with phase change microcapsules, position and content of GO, and applications of PCM/GO microcapsules. This work attempts to discuss preparation methods and heat conducting properties of the PCM/GO microcapsules, which helps to better promote the application targeted design and greatly improve the thermal properties of PCM microcapsules for various applications.

Reinforced Polymer Composites Pramendra K. Bajpai, Inderdeep Singh, 2019-12-04

Presents state of the art processing techniques and readily applicable knowledge on processing of polymer composites. The book presents the advancement in the field of reinforced polymer composites with emphasis on manufacturing techniques including processing of different reinforced polymer composites, secondary processing of green composites, and post life cycle processing. It discusses the advantages and limitations of each processing method and the effect of processing parameters on the overall performance of the composites. Characterization and applications of reinforced polymer composites are also introduced. Reinforced Polymer Composites Processing: Characterization and Post Life Cycle Assessment starts off by providing readers with a comprehensive overview of the field. It then introduces them to the fabrication of both short fiber filler reinforced polymer composites and laminated reinforced polymer composites. Next, it takes them through the processing of polymer based nanocomposites, the many advances in curing methods of reinforced polymer composites, and post life cycle processing, re processing, and disposal mechanisms of reinforced polymer composites. Numerous other chapters cover synthetic versus natural fiber reinforced plastics, characterization techniques of reinforced plastics, friction and wear analysis of reinforced plastics, secondary processing of reinforced plastics, and applications of reinforced plastics. Presents the latest development in materials processing and characterization techniques as well as applications of reinforced polymer composites. Guides users in choosing the best
