James Finley and the French engineer Claude Louis Marie Henri Navier Finley who was oriented toward the needs of rural frontier communities designed a bridge that could be easily reproduced and constructed by carpenters and blacksmiths Navier whose professional training and career reflected a tradition of monumental architecture and had linked him closely to the Parisian scientific community designed an elegant costly and technically sophisticated structure to be built in an elite district of Paris Charting the careers of these two technologists and tracing the stories of their bridges Kranakis reveals how local environments can shape design goals research practices and design to construction processes Kranakis then offers a broader look at the technological communities and institutions of nineteenth century France and America and at their ties to technological practice She shows how conditions that led to Finley s and Navier s distinct designs also fostered different systems of technical education as well as distinct ideologies and traditions of engineering research The result of this two tiered comparative approach is a reorientation of a historiographic tradition initiated by Tocqueville and explored more recently by Eugene Ferguson John Kasson and others toward a finer grained analysis of institutional and local environments as mediators between national traditions and individual styles of technological research and design The Workman's Manual of Engineering Drawing John Maxton,1891 **Outcome-Based Science, Technology, Engineering, and Mathematics Education: Innovative Practices** Yusof, Khairiyah Mohd,2012-06-30 This book provides insights into initiatives that enhance student learning and contribute to improving the quality of undergraduate STEM education Provided by publisher **Resources in Education** ,1985 **Books of India** ,1964 **EHR Directory of Awards** National Science Foundation (U.S.).
