populations in the region and provides insight into some of the threats mammals now encounter in the Southeast **The Routledge Handbook of International Law and Anthropocentrism** Vincent Chapaux, Frédéric Mégret, Usha Natarajan, 2023-06-15 This handbook explores and critiques the relationship between anthropocentrism the idea that human beings are socially and politically at the centre of the cosmos and international law While the critical study of anthropocentrism has been under way for several years it has either focused on specific subfields of international law or emanated from two distinctive strands inspired by the animal rights movement and deep ecology This handbook offers a broader study of anthropocentrism in international law as a global legal system and academic field It assesses the extent to which current international law is anthropocentric contextualises that claim in relation to broader critical theories of anthropocentrism and explores alternative ways for international law to organise relations between humans and other living and non living entities This book will interest international lawyers environmental lawyers legal theorists social theorists and those concerned with the philosophy and ethics of ecology and the non human realms Chapter 6 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license Funded by University of Gothenburg and Lund University The 'Ecosystem Approach' in International Environmental Law Vito De Lucia, 2019-03-28 The ecosystem approach broadly understood as a legal and governance strategy for integrated environmental and biodiversity management has been adopted within a wide variety of international environmental legal regimes and provides a narrative a policy approach and in some cases legally binding obligations for States to implement what has been called a new paradigm of environmental management In this last respect the ecosystem approach is also often considered to offer an opportunity to move beyond the outdated anthropocentric framework underpinning much of international environmental law thus helping re think law in the Anthropocene Against this background this book addresses the question of whether the ecosystem approach represents a paradigm shift in international environmental law and governance or whether it is in conceptual and operative continuity with legal modernity This central question is explored through a combined genealogical and biopolitical framework which reveals how the ecosystem approach is the result of multiple contingencies and contestations and of the interplay of divergent and sometimes irreconcilable ideological projects The ecosystem approach this book shows does not have a univocal identity and must be understood as both signalling the potential for a decisive shift in the philosophical orientation of law and the operationalisation of a biopolitical framework of control that is in continuity with and even intensifies the eco destructive tendencies of legal modernity It is however in revealing this disjunction that the book opens up the possibility of moving beyond the already tired assessment of environmental law through the binary of anthropocentrism and ecocentrism

Perencanaan Pembangunan Berkelanjutan Hayati Sari Hasibuan, Sri Setiawati Tumuyu, 2023-09-12 Kehadiran buku ajar ini sendiri sejatinya adalah suatu upaya pengembangan Ilmu Perencanaan Pembangunan Berkelanjutan berlandaskan pendekatan Ilmu Lingkungan Perlu diketahui bersama bahwa setiap bangsa dan negara melakukan serangkaian kegiatan perencanaan pembangunan untuk mewujudkan kesejahteraannya Namun kesejahteraan sering kali hanya dimaknai sebagai pencapaian peningkatan ekonomi dengan mengenyampingkan berbagai unsur lingkungan lainnya Akibatnya perencanaan pembangunan sering kali bersifat eksploitatif dan parsial sehingga berdampak pada kerusakan lingkungan biofisik dan sosial yang berimplikasi pada kemuduran ekonomi secara permanen ke depannya

Our Threatened Planet Emmanuel Kenneth, 2020-05-27 If extinctions are part of nature's course then why does it matter that so many species are becoming extinct now Over the long course of man's occupancy on Earth has been seemingly characterised by its dependence on nature and the ecology which has overtime greatly influenced homeostatic regulation i.e. balance of nature where clearly

nature's capacity to support man's existence has plummeted with the release of obnoxious chemicals into the environment. It is pertinent to note that all species while evolving and adapting to the demands of their habitats or modernization exigencies changes dramatically subjecting the ecologies which happen to be the fabric of life to the dynamic swirl of physical forces and of rapid decline of species diversity. If we continue to lose large and vital portions of the natural world to extinction of species and other criticalities we humans would be able to cope but plants and animals may not be able to adapt to most of these changes and as a result may die and become extinct resulting in a break in food chain. A considerable attempt has been made through this book to explicitly cover these emerging concerns or topics in a consolidated form which will provide effective understanding of environmental problems currently being faced in different world regions and perhaps not just to give the reader a fair knowledge about the huge role the ecology has in the survival of species and existence of man but to provide the extent to which the state of dynamic equilibrium from nature will deprive the generations yet unborn the right to clean and healthy environment and harmony with nature.

The Psychology of Environmental Problems, 2014-04-04. A revision of Winter's Ecological Psychology 1996, this book applies psychological theory and research to environmental problems. After outlining current environmental difficulties, the authors demonstrate how 6 major approaches in psychology—social, psychological, psychoanalytic, behavioral, physiological, cognitive, and holistic—can be applied to environmental problems. The authors demonstrate why it is critical to address environmental threats now and offer ideas on how psychological principles can contribute to building a sustainable culture. Personal examples engage the reader and provide suggestions for changing behavior and political structures. Reorganized and updated throughout, the second edition features a new chapter on neuropsychological and health issues and a list of key

concepts in each chapter. Cartoons and humorous analogies add a light touch to the book's serious message. Written for psychology and environmental studies students, the book is an excellent teaching tool in courses on environmental conservation or ecological issues found in departments of psychology, sociology, environmental science, and biology. It will also appeal to anyone interested in psychology's potential contributions to mounting ecological difficulties. **Resources in Education**, 1998
