*Novel Environments* Jayne Hildebrand, 2023-05-31 The environment concept has

shaped humanity's relationship to the natural world and has drawn attention to the effects of human actions on our natural surroundings. But when did we learn that we live in an environment? While scholars have often located the emergence of the environment concept in twentieth-century ecological and political thought, *Novel Environments: Science Description and Victorian Fiction* reconstructs a longer and a specifically literary history. It was in the descriptive worldmaking of the Victorian novel that the environment was first transformed from an abstraction into a vivid object of imagination and feeling. Engaging the scientific theories of their contemporaries, Mary Russell Mitford, George Eliot, Thomas Hardy, and Robert Louis Stevenson turned to detailed description from gardens and landscapes to weather and atmospheres to model interactions between life and its surroundings. Far from merely furnishing static background, the descriptive apparatus of the Victorian novel imagined the nonhuman environment as dynamically involved with human action, feeling, and development. In making this argument, *Novel Environments* recovers the scientific vocabulary the Victorians used to name the surroundings of living organisms. The word environment dominates our own way of speaking about the nonhuman world, but nineteenth-century scientific writers and novelists availed themselves of a richer conceptual lexicon which included environment along with less familiar concepts such as milieu, medium, and circumstance. Jayne Hildebrand traces the development of Victorian environmental thought from the earliest theorization of physical surroundings as a dynamic influence in the life sciences through the idea of a singular medium in mid-century organicism to the conception of the planet as an environmental system at the fin de siècle. By showing how novelistic description helped to produce the modern environment concept, Hildebrand sheds new light on the relationship between Victorian literature and the life sciences and reveals how literary form has shaped the ecological ideas through which we apprehend the nonhuman world.
