White-Collar Crime Brian K. Payne, 2016-07-05 The thoroughly updated Second Edition of White Collar Crime The Essentials continues to be a comprehensive yet concise resource addressing the most important topics students need to know about white collar crime Author Brian K Payne provides a theoretical framework and context for students that explores such timely topics as crimes by workers sales oriented systems crimes in the health care system crimes by criminal justice professionals and politicians crimes in the educational system crimes in economic and technological systems corporate crime environmental crime and more This easy to read teaching tool is a valuable resource for any course that covers white collar crime *Dynamics of decision making: from evidence to preference and belief* Erica Yu, David A. Lagnado, 2014-10-24 At the

core of the many debates throughout cognitive science concerning how decisions are made are the processes governing the time course of preference formation and decision. From perceptual choices such as whether the signal on a radar screen indicates an enemy missile or a spot on a CT scan indicates a tumor to cognitive value based decisions such as selecting an agreeable flatmate or deciding the guilt of a defendant, significant and everyday decisions are dynamic over time. Phenomena such as decoy effects, preference reversals and order effects are still puzzling researchers. For example, in a legal context, jurors receive discrete pieces of evidence in sequence and must integrate these pieces together to reach a singular verdict. From a standard Bayesian viewpoint, the order in which people receive the evidence should not influence their final decision, and yet order effects seem a robust empirical phenomenon in many decision contexts. Current research on how decisions unfold, especially in a dynamic environment, is advancing our theoretical understanding of decision making. This Research Topic aims to review and further explore the time course of a decision, from how prior beliefs are formed to how those beliefs are used and updated over time towards the formation of preferences and choices and post decision processes and effects. Research literatures encompassing varied approaches to the time scale of decisions will be brought into scope: a) Speeded decisions and post decision processes that require the accumulation of noisy and possibly non stationary perceptual evidence e.g. randomly moving dots stimuli within a few seconds with or without temporal uncertainty; b) Temporally extended value based decisions that integrate feedback values e.g. gambling machines and internally generated decision criteria e.g. when one switches attention selectively between the various aspects of several choice alternatives; c) Temporally extended belief based decisions that build on the integration of evidence which interacts with the decision maker's belief system towards the updating of the beliefs and the formation of judgments and preferences as in the legal context. Research that emphasizes theoretical concerns including optimality analysis and mechanisms underlying the decision process, both neural and cognitive, is presented as well as research that combines experimental and computational levels of analysis.
