The President's Fiscal Year 2014 Revenue and Economic Policy Proposals United States. Congress. House. Committee on the Budget,2013

Global Economic Prospects, Volume 9, June 2014 World Bank World Bank,2014-06-10 The global economy got off to a bumpy start this year but growth in 2015 and 2016 looks to be broadly on track Projections for developing countries in 2014 have been down downgraded by 0 5 percentage points to 4 8 percent mainly reflecting weak first quarter growth in the US due to weather and the conflict in Ukraine Going forward

growth is projected to firm to 5.3 and 5.5 percent in 2015 and 2016 supported by easy global financial conditions and rebounding exports as high income countries continue to recover under the influence of a reduced drag from fiscal consolidation and improving labor markets. Financial conditions will eventually tighten and when they do there is risk of further volatility. Most developing countries are in good fiscal and financial shape but where vulnerabilities remain countries need to tighten policy to reduce the potential impact of external shocks. Overall growth for developing countries will be solid but not strong enough to generate the income and employment gains needed to eliminate poverty by 2013. As a result countries need to focus on structural reform in order to lift growth in an enduring and sustainable manner. **OECD**

Economic Surveys: Portugal 2014 OECD, 2014-10-27 OECD's 2014 Economic Survey of Portugal examines recent economic developments, policies and prospects. Special chapters cover boosting export performance and reducing inequality and poverty. **Global Economic Prospects, Volume 8, January 2014** World Bank, 2014-02-05 High income economies appear to be finally turning the corner contributing to a projected acceleration in global growth from 2.4 percent in 2013 to 3.2 percent this year, 3.4 percent in 2015 and 3.5 percent in 2016. Overall growth in developing countries is projected to pick up modestly from 4.8 percent in 2013 to 5.3 percent this year, 5.5 percent in 2015 and 5.7 percent in 2016. In the baseline the withdrawal of quantitative easing and its effect on the long end of U.S. interest rates is assumed to follow a relatively slow, orderly trajectory. If however the taper is met with an abrupt market adjustment, capital inflows could weaken sharply, placing renewed stress on vulnerable developing economies. In a scenario where long term interest rates rise rapidly by 100 basis points, capital inflows could decline by as much as 50 percent for several quarters. *The Routledge Handbook of the Economics of Education* Brian P.
