Nanotechnology Handbook H. Panda, 2009-10-01 Nanoscience is an interdisciplinary field that have encompassed physics biology engineering chemistry and computer science among others the prefix nano appears with increasing frequency in scientific journals and the news Thus as we increase our ability to fabricate computer chips with smaller features and improve our ability to cure disease at the molecular level nanotechnology is at the doorstep Scientists and engineers believe that the fabrication of nanomachines nanoelectronics and other nanodevices will help to solve numerous problems faced by mankind today related to energy health and materials development In nanoelectronics there are two opposing developments the lithographic scaling down of semiconductor components tending towards the sub10 nanometer region to supramolecular self assembling macroscopic structure with new properties Currently the trends are mixed and one can build a variety of structures of all scales For example one can build large scale supramolecular structures serving as templates for building circuits with nanoscale components On the nanoelectronics architecture side there have also been many interesting developments trying to cope with the increasing density and smallness of components and the needs of self assembly and fault tolerance In the emerging field of nanotechnology the production of nanostructures having special physical and chemical properties with respect to those of bulk materials is an objective due to their limited size and high density of corner or edge surface sites Metal nanoparticles have received significant scientific and technological interest because of their use in applications such as catalysis electronics optics optoelectronics biological and chemical sensing and SERS Nanotechnology is now creating a growing sense of excitement in the life sciences especially biomedical devices and biotechnology as there is an immense opportunity to arrange and rearrange molecular structures The global market for nanotechnology products is worth an estimated compound annual growth rate CAGR of 11.1% from 2010 to 2015 The largest segment of the market made up of nanomaterials is expected to increase at a 5 year CAGR of 14.7% The book contains

Extraterrestrial Ethics Jensine Andresen, 2023-11-25 This unique book takes both inductive and deductive approaches to the topic of extraterrestrial ethics Inductively it asks what kind of ethics an advanced intelligent extraterrestrial species might display Deductively it asks how human beings should transform their own understanding of ethics to prepare for widespread contact with an advanced extraterrestrial species Using the ontological interpretation of quantum mechanics proposed by physicist and philosopher David Bohm *Extraterrestrial Ethics* considers how an extraterrestrial intelligence ETI may view ethical concerns relating to humankind The book examines two areas of concern nuclear technologies and the militarization and weaponization of space The text of the Fiscal Year 2022 National Defense Authorization Act FY22 NDAA in the United States clearly states that Unidentified Aerial Phenomena UAP have been reported at sites associated with nuclear weapons nuclear powered ships and submarines nuclear power generating stations etc suggesting that ETI is very concerned about the human use of nuclear technologies Furthermore the more ubiquitous level of UAP sightings by the U S military over the last few years as documented in the June 2021 report from the Office of the Director of National Intelligence ODNI in the U S suggest that ETI also is concerned about rapid acceleration relating to the militarization and weaponization of space The book concludes by advocating a normative approach to de militarize space
