Scientific American, 1910 Monthly magazine devoted to topics of general scientific interest *The Project Physics Course: Reader* Harvard Project Physics, 1970 *John Holt* Adam Dickerson, 2019-05-17 This is the first ever book to offer an analytical study of John Holt's philosophy of education. It provides a clear analysis and critical evaluation of the key themes in his work, considers the main objections to his views and discusses their relation to the contemporary homeschooling movement. The book examines Holt's critique of compulsory education and his account of the relationships between learning, freedom, intelligence and character. It argues that Holt's works contain a philosophically rich critique of instrumentalism in education and thus continue to represent a significant challenge to many mainstream views on education today. Given its scope, the book will be of interest to anyone who wants to understand Holt's work and influence as a critic of compulsory schooling, educators and education students, philosophers of education and those seeking a better grasp of the ideas behind unschooling and homeschooling.

Spontaneous Evolution Bruce H. Lipton, PhD, Steve Bhaerman, 2010-08-01 We've all heard stories of people who've experienced seemingly miraculous recoveries from illness, but can the same thing happen for our world? According to pioneering biologist Bruce H. Lipton, it's not only possible, it's already occurring. In *Spontaneous Evolution*, this world-renowned expert in the emerging science of epigenetics reveals how our changing understanding of biology will help us navigate this turbulent period in our planet's history and how each of us can participate in this global shift. In collaboration with political philosopher Steve Bhaerman, Dr. Lipton invites readers to reconsider the unquestionable pillars of biology, including random evolution, survival of the fittest, and the role of DNA, the relationship between mind and matter, how our beliefs about nature and human nature shape our politics, culture, and individual lives, and how each of us can become planetary stem cells supporting the health and growth of our world. By questioning the old beliefs that got us to where we are today and keep us stuck in the status quo, we can trigger the spontaneous evolution of our species that will usher in a brighter future.
