Active Reading**Section: How Populations Change in Size**

Read the passage below and answer the questions that follow.

Over time, the growth rates of populations change because birth rates and death rates increase or decrease. Growth rates can be positive, negative, or zero. For a population's growth rate to be zero, the average number of births must equal the average number of deaths. A population would remain the same size if each pair of adults produced exactly two offspring, and each of those offspring survived to reproduce. If the adults in a population are not replaced by new births, the growth rate will be negative and the population will shrink.

IDENTIFYING MAIN IDEAS

One reading skill is the ability to identify the main idea of a passage. The main idea is the main focus or key idea. Frequently, a main idea is accompanied by supporting information that offers detailed facts about main ideas.

In the space provided, write the letter of the term or phrase that best matches the description.

On the Dynamics of Exploited Fish Populations Raymond J.H. Beverton, Sidney J. Holt, 2012-12-06 Among the fishes a remarkably wide range of biological adaptations to diverse habitats has evolved As well as living in the conventional habitats of lakes ponds rivers rock pools and the open sea fish have solved the problems of life in deserts in the deep sea in the cold antarctic and in warm waters of high alkalinity or of low oxygen Along with these adaptations we find the most impressive specializations of morphology physiology and behaviour For example we can marvel at the high speed swimming of the marlins sailfish and warm blooded tunas air breathing in catfish and lungfish parental care in the mouth brooding cichlids and viviparity in many sharks and toothcarps Moreover fish are of considerable importance to the survival of the human species in the form of nutritious delicious and diverse food Rational exploitation and management of our global stocks of fishes must rely upon a detailed and precise

insight of their biology The Chapman Hall Fish and Fisheries Series aims to present timely volumes reviewing important aspects of fish biology Most volumes will be of interest to research workers in biology zoology ecology and physiology but an additional aim is for the books to be accessible to a wide spectrum of non specialist readers ranging from undergraduates and postgraduates to those with an interest in industrial and commercial aspects of fish and fisheries

Rieseberg, 2016-07-15 *Invasion Genetics* the Baker demographic genetics the role of stochastic forces in the invasion process the contemporary evolution of local adaptation the significance of epigenetics and transgenerational plasticity for invasive species the genomic consequences of colonization the search for invasion genes and the comparative biology of invasive species A wide diversity of invasive organisms are discussed including plants animals fungi and microbes

Reproductive Science and Integrated Conservation W. V. Holt, 2003 Reproduction is essential to the continuation and evolution of life on this planet and is therefore a centrally important process in the conservation of wildlife However reproductive mechanisms are well understood in only a handful of vertebrate species mostly domestic livestock and laboratory animals This means that attempts to develop and implement management policies for wildlife conservation and especially for endangered species that by definition are difficult to study are often based on poor data or no data at all In *Reproductive Science and Integrated Conservation* leading authorities provide glimpses of reproductive diversity in fishes amphibia reptiles birds and mammals Conservation plans are founded on the assumption that reproduction will be successful but what if it fails This book reviews the many factors that influence reproduction including genetics behaviour and nutrition and experts assess the potential conservation relevance of the recent rapid advances in reproductive technology and medicine

Population Dynamics and Projection Methods John Stillwell, Martin Clarke, 2011-02-15 Although the human population growth rate of the world has been declining since peaking in the early 1960s the populations of individual countries are changing at different rates Population dynamics at national level are partly determined by levels of fertility and mortality but the impact of international migration is playing an increasingly important role Moreover internal migration plays a major part in population change at the sub national level This fourth volume in the series *Understanding Population Trends and Processes* is a celebration of the work of Professor Philip Rees It contains chapters by contributors who have collaborated with Phil Rees on research or consultancy projects or as postgraduate students Several chapters demonstrate the technical nature of population projection modelling and simulation methods while others illustrate issues relating to data availability and estimation This book demonstrates the application of theoretical and modelling methods and addresses key issues relating to contemporary demographic patterns and trends

Handbook of Fish Biology and Fisheries Paul J. B. Hart, John D. Reynolds, 2008-04-15 Recent decades have witnessed strong declines in fish stocks

around the globe amid growing concerns about the impact of fisheries on marine and freshwater biodiversity. Fisheries biologists and managers are therefore increasingly asking about aspects of ecology, behaviour, evolution and biodiversity that were traditionally studied by people working in very separate fields. This has highlighted the need to work more closely together in order to help ensure future success both in management and conservation. The Handbook of Fish Biology and Fisheries has been written by an international team of scientists and practitioners to provide an overview of the biology of freshwater and marine fish species together with the science that supports fisheries management and conservation. This volume subtitled Fish Biology reviews a broad variety of topics from evolutionary relationships and global biogeography to physiology, recruitment, life histories, genetics, foraging behaviour, reproductive behaviour and community ecology. The second volume subtitled Fisheries uses much of this information in a wide ranging review of fisheries biology including methods of capture, marketing, economics, stock assessment, forecasting, ecosystem impacts and conservation. Together these books present the state of the art in our understanding of fish biology and fisheries and will serve as valuable references for undergraduates and graduates looking for a comprehensive source on a wide variety of topics in fisheries science. They will also be useful to researchers who need up to date reviews of topics that impinge on their fields and decision makers who need to appreciate the scientific background for management and conservation of aquatic ecosystems. The first volume concentrates on aspects of fish biology and ecology both at the individual and population levels whilst the second volume addresses the assessment and management of fish populations and ecosystems. Written by an international team of expert scientists and practitioners. An invaluable reference tool for both students, researchers and practitioners working in the fields of fish biology and fisheries.

Trophic Ecology James E. Garvey, Matt Whiles, 2016-09-19. This book is a bridge between ecological paradigms, organismal, community approaches to food web dynamics and ecosystem level approaches to production. The unification of organismal, community and ecosystem approaches in ecology is emerging due to the growing availability of new techniques for assessing trophic interactions and their implications for ecosystems. Trophic Ecology is a formal text for both newcomers to the discipline as well as seasoned professionals looking for new ideas and refreshers on old topics. A wide range of topics are explained including autotrophy, heterotrophy, omnivory, decomposition, foraging behavior and theory, trophic cascades, bioenergetics and production. The audience is upper level undergraduate students and entry level graduate students interested in autecological, organismal approaches to ecology, community and ecosystem ecology. It is also a reference text for instructors teaching upper division courses providing examples from the literature, quantitative approaches to teach and new hypotheses yet to be fully tested by

Fish Reproductive Biology Tore Jakobsen, Michael J. Fogarty, Bernard A. Megrey, Erlend Moksness, 2016-01-22 Fish recruitment is a key process for maintaining sustainable fish populations In the marine environment fish recruitment is carried out in many different ways all of which have different life history strategies The objective of this book is to argue for greater linkages between basic and applied research on fisheries recruitment and assessment and management of exploited fish stocks Following an introductory chapter this second edition of *Fish Reproductive Biology* is organized into 3 main sections Biology Population Dynamics and Recruitment Information Critical to Successful Assessment and Management Incorporation of Reproductive Biology and Recruitment Considerations into Management Advice and Strategies The authors collectively bring a wide range of diverse experience in areas of reproductive biology fisheries oceanography stock assessment and management Fully updated throughout the book will be of great interest to a wide audience It is useful as a textbook in graduate and undergraduate courses in fisheries biology fisheries science and fisheries resource management and will provide vital information for fish biologists fisheries scientists and managers Water System Science and Policy Interfacing Philippe Quevauviller, 2010 Recent discussions among scientists and policy makers have highlighted that knowledge generated by many research and demonstration projects is not reaching policymakers in an efficient way Conversely the consideration of research results by the policy making community is not straightforward and difficulties arise in integrating the latest research developments in legislation The difficulty is enhanced by the fact that the policy making community is not defining its role as client sufficiently well and the dialogue and communication channels are far from ideal to ensure an efficient flow of information An increasing number of experts consider that improvements could be achieved through the development of a science policy interface so that R D results are synthesised in a way to efficiently feed policy implementation and that short medium and long term research needs may be identified This book examines the issue of integrating science into policy with an emphasis on water system knowledge and related policies An important feature of the book is the discussion of science policy interfacing needs illustrated by examples from authors from different countries in relation to water system management This publication is timely in that the science policy interfacing is now identified as a key challenge worldwide with regard to integrated water resource management and therefore the book will be of great interest to scientists water managers and stakeholders Readers will also benefit from a better understanding of the needs benefits and drawbacks of an established transfer mechanism of scientific outputs to policies **Chinese Fishes** David L.G. Noakes, Aldemaro Romero, Yahui Zhao, Yingqi Zhou, 2009-11-18 This book documents the current state of research by Chinese scientists on fish biology and fisheries and brings together manuscripts by authors from research institutions universities and government agencies There are papers on aquaculture life history genetics marine and freshwater biology conservation physiology new species descriptions and truly amazing hypogean fishes The information on these remarkable cave species

shows how much we have yet to learn from that incredible fauna There are papers dealing with some of the largest fishes and some of the smallest cave species There are papers dealing with some of the most traditional forms of aquaculture and others with the most modern molecular techniques The volume includes papers on critically threatened native fishes as well as the most common food species such as grass carp *Ctenopharyngodon idella* The information on rare and threatened species shows how China is dealing with their endangered fishes The information on their carp species will be invaluable to those in other countries who will either take advantage of the productive carp species in aquaculture or try to manage them as invasive species outside China For the first time we bring together a complete overview of the state of fisheries research in China
