Perspectives in Human Growth, Development and Maturation Parasmani Dasgupta,Roland Hauspie,2013-03-14

One morning in 1969 out of the blue I received a letter which both distressed and astonished me It was from a Prof S R Das in Calcutta who requested me to accept for eventual analysis a mountain of anthropometric data he had accumulated as he was ill and did not expect to survive to analyse it himself The data provided the astonishment twenty two anthropometric characters recorded every six months or a year over a period of 14 years in a mixed longitudinal study of some 560 children aged six months to twenty years Most were in families with siblings also in the study and every child was measured every time by S R Das himself The archive was unique combining the personal anthropometry of R H Whitehouse in the Harpenden Growth Study and the family approach of the Fels Growth Study This was a study of which neither I nor anyone of my acquaintance had heard Even in India Prof Das work was scarcely known It turned out Das was a scholarly man quiet and unassuming absolutely committed to his Sarsuna Barisha Growth Study just the obverse of the professional showman Clearly this was not a request I could refuse although I already had in hand enough projects to occupy Siva himself

This volume reports the proceedings of a NATO Advanced Workshop held in Castelvechio Pascoli Italy from August 28 September 1 1989 An important inspiration for this Workshop came from our studies in Helsinki and Denmark which have found that exposure to an influenza epidemic during the second trimester of fetal development increases the risk of adult schizophrenia This finding has stimulated an important new hypothesis in the study of the etiology of schizophrenia It has suggested the possibility that disturbances of brain development during gestation may contribute to the risk of adult schizophrenia We determined that it would be of value to bring together schizophrenia researchers and those doing basic studies of the development of the brain Both groups of researchers were encouraged to communicate at a level that would help other scientists to integrate their knowledge and techniques into their own discipline For this reason perhaps the papers of this volume are remarkably clear and not difficult to understand The first four chapters describe the neurochemical and structural aspects of brain development The chapter by Dziegielewska and Saunders discusses transport mechanisms and the properties of endogenous and exogenous substances that control the internal environment of the developing brain In the second chapter Nowakowski reports on his studies of the development of the hippocampus in mice genetically inbred to exhibit disruptions of neural migration

Humanity and Human Sexuality: The Origin and Nature of Sexual Preference Kevin Franklin, 2024-03-28 In *Humanity and Human Sexuality: The Origin and Nature of Sexual Preference* Dr Kevin Franklin embarks on an extraordinary exploration of the human being of mind and their potential. Delving deep into themes of confusion and disorder he unveils how a trickster mind can hinder an individual's true potential for life and freedom. Drawing from his own profound experiences of childhood psychosis which once seemed to destine him for a life overshadowed by schizophrenia and the threat of early suicide Dr Franklin defies expectations. This book ventures beyond traditional boundaries to examine the metaphysical aspects of psychological order offering a unique perspective on the often misunderstood concepts of societal and psychological disorders. Dr Franklin's insights extend into a scientific demonstration of the innate origins and nature of both heterosexual and homosexual preferences. *Humanity and Human Sexuality: The Origin and Nature of Sexual Preference* illuminates various fields: Philosophy, Religion, History, Science, Society and Psychology offering a revolutionary viewpoint on these disciplines. It challenges long held beliefs and misconceptions particularly in the realms of sexual identity, the gender and transgender discussion and the complex relationship between religion and science. Structured in two parts the book first deconstructs the mythology of sexual identity before reconstructing a comprehensive understanding of human sexuality. It seeks to resolve some of humanity's most pressing issues: the lack of human compassion, the intricacies of gender identity and the historical tensions between religious beliefs and scientific understanding. This book is an essential read for anyone seeking a deeper understanding of the origins and nature of sexual preference and identity and the broader implications for society.
