

# Exponential Function

An **exponential function** is a mathematical function in the form  $y = ab^x$

The graph of an exponential function has a **horizontal asymptote**.

$a$  and  $b$  are  
constants  
with  $b > 0$

The curve gets increasingly close to the  $x$ -axis but does not touch it.

These graphs all have a horizontal asymptote at  $y = 0$  (the  $x$ -axis) because  $ab^x$  can never equal zero.

solution is of this type are of real interest nowadays in many phenomena as oscillations vibrations rotations or wave propagation The authors studied the field for many years and contributed to it Since the total number of papers accumulated so far in this field exceeds 200 and the fact that these papers are spread over journals with various profiles such as applied mathematics computer science computational physics and chemistry it was time to compact and to systematically present this vast material In this book a series of aspects is covered ranging from the theory of the procedure up to direct applications and sometimes including ready to use programs The book can also be used as a textbook for graduate students
