with Markov Decision Processes Mausam Natarajan,Andrey Kolobov,2022-06-01 Markov Decision Processes MDPs are
 widely popular in Artificial Intelligence for modeling sequential decision making scenarios with probabilistic dynamics They
 are the framework of choice when designing an intelligent agent that needs to act for long periods of time in an environment
 where its actions could have uncertain outcomes MDPs are actively researched in two related subareas of AI probabilistic
 planning and reinforcement learning Probabilistic planning assumes known models for the agent's goals and domain
 dynamics and focuses on determining how the agent should behave to achieve its objectives On the other hand reinforcement
 learning additionally learns these models based on the feedback the agent gets from the environment This book provides a
 concise introduction to the use of MDPs for solving probabilistic planning problems with an emphasis on the algorithmic
 perspective It covers the whole spectrum of the field from the basics to state of the art optimal and approximation algorithms
 We first describe the theoretical foundations of MDPs and the fundamental solution techniques for them We then discuss
 modern optimal algorithms based on heuristic search and the use of structured representations A major focus of the book is
 on the numerous approximation schemes for MDPs that have been developed in the AI literature These include
 determinization based approaches sampling techniques heuristic functions dimensionality reduction and hierarchical
 representations Finally we briefly introduce several extensions of the standard MDP classes that model and solve even more
 complex planning problems Table of Contents Introduction MDPs Fundamental Algorithms Heuristic Search Algorithms

 Florian Defregger,2019-01-10 Revenue Management has proven successful in a number of service industries Starting out in

the airlines industry in the 1970s Revenue Management spread to tourism sectors such as hotels and cruise ships but also to TV advertising and other industries Revenue Management for the manufacturing sector is a relatively new concept which is explored in this book In order to test if there is a potential for Revenue Management in the manufacturing sector a survey was conducted and sent to a large number of manufacturing companies in the paper steel and aluminium industries The results show that Revenue Management is already partly implemented in these industries but has further greater potential for bottom line improvement in these industries The book continues with a number of mathematical decision models and heuristics for several application scenarios The numerical results of the models indicate that manufacturing companies should seriously consider thinking about implementing a Revenue Management system in order to enhance profits significantly

Intelligent Systems and Applications Yaxin Bi,Rahul Bhatia,Supriya Kapoor,2019-08-23 The book presents a remarkable collection of chapters covering a wide range of topics in the areas of intelligent systems and artificial intelligence and their real world applications It gathers the proceedings of the Intelligent Systems Conference 2019 which attracted a total of 546 submissions from pioneering researchers scientists industrial engineers and students from all around the world These submissions underwent a double blind peer review process after which 190 were selected for inclusion in these proceedings As intelligent systems continue to replace and sometimes outperform human intelligence in decision making processes they have made it possible to tackle a host of problems more effectively This branching out of computational intelligence in several directions and use of intelligent systems in everyday applications have created the need for an international conference as a venue for reporting on the latest innovations and trends This book collects both theory and application based chapters on virtually all aspects of artificial intelligence presenting state of the art intelligent methods and techniques for solving real world problems along with a vision for future research it represents a unique and valuable asset
