Figure 25-10. A wiring diagram of a typical domestic, single-door automatic defrost refrigerator with a defrost timer and freezer fan. Note color coding of wiring to aid in tracing the circuits.

Goodheart-Willcox Publisher

Figure 25-11. A manual start test cord arrangement for hermetic compressors. Clip 1 attaches to the compressor's common terminal. Clip 2 attaches to the run terminal. Clip 3 attaches to the start terminal. Clip 4 attaches to the ground.

After a second or two, open the start switch to drop the start winding out of the circuit. If the motor operates correctly, the problem is in the external circuit.

To test a capacitor-start, induction-run (CSIR) motor, a new start capacitor and an extra jumper cord are required, **Figure 25-13**. Replace the capacitor in the system with a new one of the same voltage and microfarad rating. Connect the wiring as shown in the diagram and operate the circuit as described previously. Close the start switch and then the run switch. Open the start switch after a second or two. If the motor operates correctly, the problem is in the external circuit.

Safety Note

Capacitor Safety

After testing is completed, remember to short the testing capacitor using a 20,000 Ω (20 k Ω), 2 W resistor. This will eliminate the possibility of electrical shock from the capacitor.

To test a capacitor-start, capacitor-run (CSCR) motor, several items are needed: a new start capacitor, a new run capacitor, and several sets of jumper cords, **Figure 25-14**. Use new capacitors of the same rating
