### Types of Data

**Quantitative** - numerical data that can be measured

**Qualitative** - non-numerical data that describes qualities

**Primary** - data collected first-hand from the source

**Secondary** - data collected from existing sources

**Discrete** - data that can only take specific values

**Continuous** - data that can take any value within a range

**Population** - the entire group of individuals being studied

**Sample** - a subset of the population

**Sampling** - the process of selecting a sample from a population

**Random Sampling** - every member of the population has an equal chance of being selected

**Systematic Sampling** - selecting every nth member of the population

**Stratified Sampling** - dividing the population into strata and sampling from each

**Cluster Sampling** - dividing the population into clusters and sampling from one or more clusters

### Measures of Central Tendency

**Mean** - the average of all the values

**Median** - the middle value when the data is ordered

**Mode** - the value that appears most frequently

**Range** - the difference between the highest and lowest values

**Interquartile Range (IQR)** - the range between the first and third quartiles

**Standard Deviation** - a measure of the spread of the data

**Variance** - the square of the standard deviation

**Coefficient of Variation** - a measure of the relative variability

### Measures of Dispersion

**Range** - the difference between the highest and lowest values

**Interquartile Range (IQR)** - the range between the first and third quartiles

**Standard Deviation** - a measure of the spread of the data

**Variance** - the square of the standard deviation

**Coefficient of Variation** - a measure of the relative variability

### Probability

**Sample Space** - the set of all possible outcomes

**Event** - a subset of the sample space

**Probability** - the chance of an event occurring

**Relative Frequency** - the ratio of the number of times an event occurs to the number of trials

**Theoretical Probability** - the probability of an event occurring based on the structure of the situation

**Experimental Probability** - the probability of an event occurring based on the results of an experiment

### Types of Bias

**Selection Bias** - when the sample is not representative of the population

**Response Bias** - when the responses are not honest or accurate

**Non-response Bias** - when some members of the population do not respond

**Coverage Bias** - when the sample does not cover the entire population

### Systematic Sampling

**Definition** - a method of selecting a sample from a population by taking every nth member

**Advantages** - easy to implement, ensures a spread of the population is covered

**Disadvantages** - can be biased if there is a pattern in the population

**Example** - selecting every 10th person from a list of names

### Stratified Sampling

**Definition** - a method of selecting a sample from a population by dividing it into strata and sampling from each

**Advantages** - ensures that all groups are represented, more accurate than simple random sampling

**Disadvantages** - can be more complex and time-consuming

**Example** - dividing a population by age groups and sampling from each group

Method	Advantages	Disadvantages
Simple Random	Every member has an equal chance of being selected	Can be time-consuming for large populations
Systematic	Easy to implement, ensures a spread of the population is covered	Can be biased if there is a pattern in the population
Stratified	Ensures that all groups are represented, more accurate than simple random sampling	Can be more complex and time-consuming
Cluster	Easy to implement, especially for large populations	Can be biased if the clusters are not representative of the population
Convenience	Easy to implement, no need for a list of the population	Can be highly biased, not representative of the population
