Goodenough Draw A Person Test Scoring:

Understanding Psychological Testing in Children Stewart Gabel,G.D. Oster,S.M. Butnik,1986-08-31 There is a considerable amount of interest within pediatrics and primary health care that is currently being directed toward the behavioral and emotional problems of childhood Traditionally these areas have been emphasized by child psychiatrists child psychologists and psychiatric social workers Now however the detection and in some cases the assessment and treatment of children with these types of disturbances fall within the province of primary child health care professionals Even when the child psychiatrist or child psychologist provides the primary mental health treatment for the child specialists such as pediatricians family physicians pediatric nurses pediatric nurse practitioners and speech therapists remain instrumental in support of the ongoing psychotherapeutic process as providers of some other aspect of total health care to the child and family For these pediatricians family physicians and other nonpsychologist primary health care providers it is essential to acquire an understanding and effective working knowledge of important psychological information and concepts to utilize within their own framework and professional responsibilities In order that this may be accomplished these professionals with limited backgrounds in psychology must better understand how psychologists themselves assess children and how they derive the conclusions reflected in the statements and reports that are shared with members of their own and other disciplines In short nonpsychologists must become substantially more familiar with psychological assessment particularly with psychological testing and the subsequent reporting of results

Neuropsychological Assessment Muriel Deutsch Lezak,1995-03-02 The 12 chapters in the second section contain nearly all of the tests and assessment techniques covered in the previous editions plus many additional ones including newly developed neuropsychological tests tests from other branches of psychology research techniques that have only recently been introduced into clinical neuropsychology tests originating in Europe and elsewhere and a few measures as yet untried by neuropsychology that appear to be potentially useful for neuropsychological purposes Thus the third edition of *Neuropsychological Assessment* maintains its multipurpose functions as an authoritative textbook reference work and practitioner's manual

The Pictorial World of the Child Maureen Cox,2005-11-17 This lavishly illustrated book gives a comprehensive and scholarly account of children's understanding and appreciation of art and their developing ability to produce their own pictures It discusses the main influences on children's picture making and considers the intriguing question does children's art follow the same pattern of development as the history of art As well as discussing the artistic development of typically developing children the book also includes a discussion of children with intellectual disabilities and those with a talent for art some of whom are children with autism
