Animal Eyes Michael F. Land, Dan-Eric Nilsson, 2012-03 This book covers the way that all known types of eyes work from their optics to the behaviour they guide The ways that eyes sample the world in space and time are considered and the evolutionary origins of eyes are discussed This new edition incorporates discoveries made since the first edition published in 2001

Anatomy of the Human Eye, 19??

Eyes to See Michael Land, 2018-11-15 Vision is the sense by which we and other animals obtain most of our information about the world around us Darwin appreciated that at first sight it seems absurd that the human eye could have evolved by natural selection But we now know far more about vision the many times it has independently evolved in nature and the astonishing variety of ways to see The human eye with a lens forming an image on a sensitive retina represents just one Scallops shrimps and lobsters all use mirrors in different ways Jumping spiders scan with their front facing eyes to check whether the object in front is an insect to eat another spider to mate with or a predator to avoid Mantis shrimps can even measure the polarization of light Animal eyes are amazing structures often involving precision optics and impressive information processing mainly using wet protein not the substance an engineer would choose for such tasks In *Eyes to See* Michael Land one of the leading world experts on vision explores the varied ways in which sight has evolved and is used in the natural world and describes some of the ingenious experiments researchers have used to uncover its secrets He also discusses human vision including his experiments on how our eye movements help us to do everyday tasks as well as skilled ones such as sight reading music or driving He ends by considering the fascinating problem of how the constantly shifting images from our eyes are converted in the brain into the steady and integrated conscious view of the world we experience

Vertebrate Eye Development M. Elizabeth Fini, 2012-09-07 Who would believe that so small a space could contain the images of all the universe Leonardo da Vinci The last years of the 20th century have found the discipline of Developmental Biology returning to its original position at the forefront of biological research This progress can be attributed to the burgeoning knowledge base on molecules and gene families and to the power of the molecular genetic approach Topping the list of organ systems which have provided the most significant advances would have to be the eye The vertebrate eye was one of the classic embryologic models used to demonstrate many important principles including the concepts of inductive tissue interactions first put forth in the early

1900s Within the last decade of this century a return to some of the old questions with the new approaches has put eye development back into the limelight I find this a highly appropriate topic for a book which aims to spark research for the new millennium We begin with a chapter that discusses the anatomy of eye development providing the basic reference information for the chapters that follow A novel aspect of this introduction is the connection made between developmental strategies and the eye's optical function What also emerges from this chapter is the number of important eye structures that have barely been touched by the modern developmental biologist Work on cornea and anterior chamber development has lagged behind lens and retina

Strategies for Known and Novel Disease Gene Identification in Developmental Eye Disorders Luke K. J. St Heaps, 2008 **"The" Genetic Basis of Eye Diseases** Jordi Maggi, 2021 *Invertebrate and Vertebrate Eye Development* Ross L. Cagan, Thomas A. Reh, 2010 Vision is our primary sensory modality and we are naturally curious as to how the visual system assembles The visual system is in many ways remarkably simple a repeating assemblage of neurons and support cells that parse the visual field through precision and redundancy Through this simplicity the eye has often led the way in our exploration of how an organ is assembled Eye development has therefore long been a favorite for exploring mechanisms of cell fate choice patterning and cell signaling This volume which is part of the Current Topics in Developmental Biology series highlights the exceptional advances over the past twenty years Contributions from researchers who are active in identifying new paradigms to explore Review of our current state of knowledge Chapters written by authors with a new generation approach that takes a more systems approach to identifying factors and better defines cell subtypes

Genomic and Functional Approaches in Identification and Characterisation of Novel Eye Disease Genes Saira Yousoof, 2014 **Facets of Vision** Doekele Gerben Stavenga, Roger Clayton Hardie, 1989 The papers published in this Volume are the fruits of a symposium held in Regensburg in April 1987 The meeting was held to commemorate two most significant events in the development of compound eye research In chronological order these are firstly Sigmund Exner's seminal monograph on the physiology of compound eyes of crustaceans and insects which was first published in Vienna in 1891 and is now shortly to appear for the first time in the English translation Exner S 1989 *The Physiology of the Compound Eyes of Insects and Crustaceans* Springer Berlin Heidelberg New York Tokyo Secondly the meeting was also held in honour of Professor Hansjochem Autrum's 80th birthday Professor Autrum who is justly acknowledged as one of the pioneers of modern compound eye research attended the meeting as the guest of honour In keeping with these historical occasions it has been our intention in this volume to present a comprehensive collection of short reviews covering the major aspects of compound eye research Whilst the most up to date developments have been included in every field from optics through photochemistry phototransduction integrative processes and behavior an attempt has also been made to provide a historical perspective **The Identification and the Functional Validation of Eye Development and Regeneration Genes in Schmidtea Mediterranea**, 2015 Multi-approach Analysis for Identification and Functional Characterization of Eye
