

Now let's assemble the outer solar system as Copernicus did.

4. Computing θ_e . Copernicus knew that it takes 365 days for Earth to circle the Sun once, that is, for it to move through an angle of 360 degrees. Therefore, each day, Earth moves through an angle given by the mathematical expression $\left(\frac{1 \text{ day}}{365 \text{ days}}\right) \times 360 \text{ degrees}$. Or after d days, Earth has moved $\left(\frac{d}{365}\right) \times 360 \text{ degrees}$.
 - a. Compute how many degrees Earth moves in its orbit in 1 day.
 - b. Copernicus counted how many days elapsed between opposition (point E) and quadrature (point E'): 107 days. Using the given expression, compute how many degrees the Earth moves in 107 days. This is angle θ_e .
5. Computing θ_m . Copernicus also knew that it takes 687 days for Mars to circle the Sun once, that is, for Mars to move through an angle of 360 degrees.
 - a. Following the procedure in Part 4, write down a mathematical expression that represents how many degrees Mars moves in its orbit each day.
 - b. Now write down an expression that represents how many degrees Mars moves in its orbit in d days.
 - c. Compute how many degrees Mars moves in the 107 days between opposition and quadrature. This is angle θ_m .
6. Computing θ . Substitute your answers to Parts 4 and 5 into **Equation 9-3** to compute the value of angle θ .
7. Mars's orbit. Finally, use Equation 9-2 to compute the radius of Mars's orbit, in AUs.

■ EXTRA CREDIT: Jupiter's and Saturn's orbits — Do these planets

Jupiter takes 4332 days—almost 12 years—to orbit the Sun and around 88 days to go from opposition to the next quadrature. Saturn takes 10,761 days—nearly 30 years—to complete its orbit and there are also about 88 days between its opposition and next quadrature.

- a. On a separate sheet of paper, apply the above procedure for Mars to determine the radii of the orbits of Jupiter and Saturn, in AUs.
- b. Using a ruler, draw a careful scale-model showing the spacings of the six known planets in Copernicus's solar system to the scale 1 cm = 1 AU.

Lab Activity A Laboratory Manual Answer Key
