It includes chapters on convexity and related concepts, inequalities for mean values, sums, functions, operators, functionals, integrals, and their applications in various branches of mathematics and related sciences, fractional integral inequalities, and weighted type integral inequalities. It also presents their wide applications in biomathematics, boundary value problems, mechanics, queueing models, scattering, and geomechanics in a concise but easily understandable way that makes the further ramifications and future directions clear. The broad scope and high quality of the contributions make this book highly attractive for graduates, postgraduates, and researchers. All the contributing authors are leading international academics, scientists, researchers, and scholars.

Convexity and Concentration Eric Carlen, Mokshay Madiman, Elisabeth M. Werner, 2017-04-20 This volume presents some of the research topics discussed at the 2014 2015 Annual Thematic Program Discrete Structures Analysis and Applications at the Institute of Mathematics and its Applications during the Spring 2015 where geometric analysis, convex geometry, and concentration phenomena were the focus. Leading experts have written surveys of research problems, making state-of-the-art results more conveniently and widely available. The volume is organized into two parts. Part I contains those contributions that focus primarily on problems motivated by probability theory, while Part II contains those contributions that focus primarily on problems motivated by convex geometry and geometric analysis. This book will be of use to those who research convex geometry, geometric analysis, and probability, directly or apply such methods in other fields. *Harmonic Analysis, Partial Differential Equations, Banach Spaces, and Operator Theory (Volume 2)* María Cristina Pereyra, Stefania Marcantognini, Alexander M. Stokolos, Wilfredo Urbina, 2017-07-10 This book is the second of a two-volume series. Covering a range of subjects from operator theory and classical harmonic analysis to Banach space theory, this book features fully refereed high-quality papers exploring new results and trends in weighted norm inequalities, Schur-Agler class functions, complex analysis, dynamical systems, and dyadic harmonic analysis. Graduate students and researchers in analysis will find inspiration in the articles collected in this volume, which emphasize the remarkable connections between harmonic analysis and operator theory. A survey of the two-weight problem for the Hilbert transform and an expository article on the Clark model to the case of non-singular measures and applications to the study of rank-one perturbations are included. The material for this volume is based on the 13th New Mexico Analysis Seminar held at the University of New Mexico April 3-4, 2014, and on several special sections of the Western Spring Sectional Meeting at the University of New Mexico April 4-6, 2014. During the event, participants honored the memory of Cora Sadosky, a great mathematician who recently passed away and who made significant contributions to the field of harmonic analysis. Cora was an exceptional scientist and human being. She was a

world expert in harmonic analysis and operator theory publishing over fifty five research papers and authoring a major textbook in the field Participants of the conference include new and senior researchers recent doctorates as well as leading experts in the area *Contributions in Mathematics and Engineering* Panos M. Pardalos,Themistocles M.

Rassias,2016-10-04 The contributions in this volume aim to deepen understanding of some of the current research problems and theories in modern topics such as calculus of variations optimization theory complex analysis real analysis differential equations and geometry Applications to these areas of mathematics are presented within the broad spectrum of research in Engineering Science with particular emphasis on equilibrium problems complexity in numerical optimization dynamical systems non smooth optimization complex network analysis statistical models and data mining and energy systems Additional emphasis is given to interdisciplinary research although subjects are treated in a unified and self contained manner The presentation of methods theory and applications makes this tribute an invaluable reference for teachers researchers and other professionals interested in pure and applied research philosophy of mathematics and mathematics education Some review papers published in this volume will be particularly useful for a broader audience of readers as well as for graduate students who search for the latest information Constantin Carath odory s wide ranging influence in the international mathematical community was seen during the first Fields Medals awards at the International Congress of Mathematicians Oslo 1936 Two medals were awarded one to Lars V Ahlfors and one to Jesse Douglass It was Carath odory who presented both their works during the opening of the International Congress This volume contains significant papers in Science and Engineering dedicated to the memory of Constantin Carath odory and the spirit of his mathematical influence

numerical method to establish new hypercontractivity estimates in group von Neumann algebras They illustrate their method with free groups triangular groups and finite cyclic groups for which they obtain optimal time hypercontractive inequalities with respect to the Markov process given by the word length and with an even integer Interpolation and differentiation also yield general hypercontractivity for via logarithmic Sobolev inequalities The authors method admits further applications to other discrete groups without small loops as far as the numerical part which varies from one group to another is implemented and tested on a computer The authors also develop another combinatorial method which does not rely on computational estimates and provides non optimal hypercontractive inequalities for a larger class of groups lengths including any finitely generated group equipped with a conditionally negative word length like infinite Coxeter groups The authors second method also yields hypercontractivity bounds for groups admitting a finite dimensional proper cocycle

Hypercontractivity fails for conditionally negative lengths in groups satisfying Kazhdan's property T [Proceedings Of The International Congress Of Mathematicians 2018 \(Icm 2018\) \(In 4 Volumes\)](#) Boyan Sirakov, Paulo Ney De Souza, Marcelo Viana, 2019-02-27 The Proceedings of the ICM publishes the talks by invited speakers at the conference organized by the International Mathematical Union every 4 years It covers several areas of Mathematics and it includes the Fields Medal and Nevanlinna Gauss and Leelavati Prizes and the Chern Medal laudatios

Fractal Functions Communication with Fractional Calculus A. Gowrisankar, T. M. C. Priyanka, Santo Banerjee, 2025-09-26 This book provides an in depth examination of fractal functions focusing on their self similar structures and the relatively simple construction procedures that make them a subject of fascination in mathematics and engineering By exploring fractal interpolation functions the book sheds light on naturally occurring phenomena that exhibit irregularity and non integer dimensions offering a fresh perspective on these complex mathematical constructs The chapters cover a range of topics including the foundational principles of fractal geometry the construction of fractal functions through iterated function systems and the critical role of scaling parameters Readers will find expert analyses of affine and non affine fractal functions as well as discussions on the application of fractional calculus methods such as the Riemann Liouville and Caputo derivatives The book also explores the practical applications of fractal interpolation in areas like epidemiology and climate dynamics demonstrating the relevance of these mathematical concepts to real world problems This volume is an essential resource for researchers and scholars in mathematics engineering and related fields It offers a comprehensive overview of the current research on fractal functions and fractional calculus providing readers with the tools to understand and apply these concepts in their work Whether you are an academic seeking to deepen your knowledge or a practitioner looking to apply fractal functions to practical challenges this book is a valuable addition to your library It invites you to engage with the latest research and explore the potential of fractal functions in addressing complex scientific and engineering problems [Geometric Aspects of Functional Analysis](#)

Bo'az Klartag, Emanuel Milman, 2020-07-08 Continuing the theme of the previous volumes these seminar notes reflect general

trends in the study of Geometric Aspects of Functional Analysis understood in a broad sense Two classical topics represented are the Concentration of Measure Phenomenon in the Local Theory of Banach Spaces which has recently had triumphs in Random Matrix Theory and the Central Limit Theorem one of the earliest examples of regularity and order in high dimensions Central to the text is the study of the Poincaré and log Sobolev functional inequalities their reverses and other inequalities in which a crucial role is often played by convexity assumptions such as Log Concavity The concept and properties of Entropy form an important subject with Bourgain's slicing problem and its variants drawing much attention Constructions related to Convexity Theory are proposed and revisited as well as inequalities that go beyond the Brunn-Minkowski theory One of the major current research directions addressed is the identification of lower dimensional structures with remarkable properties in rather arbitrary high dimensional objects In addition to functional analytic results connections to Computer Science and to Differential Geometry are also discussed

Harmonic Analysis and Partial

Differential Equations Anatoly Golberg, Peter Kuchment, David Shoikhet, 2023-03-25 Over the course of his distinguished career Vladimir Maz'ya has made a number of groundbreaking contributions to numerous areas of mathematics including partial differential equations function theory and harmonic analysis The chapters in this volume compiled on the occasion of his 80th birthday are written by distinguished mathematicians and pay tribute to his many significant and lasting achievements
