Friction Stir

Welding Daniela Lohwasser, Zhan Chen, 2009-12-18 Friction stir welding FSW is a highly important and recently developed joining technology that produces a solid phase bond. It uses a rotating tool to generate frictional heat that causes material of the components to be welded to soften without reaching the melting point and allows the tool to move along the weld line. Plasticized material is transferred from the leading edge to trailing edge of the tool probe leaving a solid phase bond between the two parts. Friction stir welding from basics to applications reviews the fundamentals of the process and how it is used in industrial applications. Part one discusses general issues with chapters on topics such as basic process overview, material deformation and joint formation in friction stir welding, inspection and quality control and friction stir welding equipment requirements and machinery descriptions as well as industrial applications of friction stir welding. A chapter giving an outlook on the future of friction stir welding is included in Part one. Part two reviews the variables in friction stir welding including residual stresses in friction stir welding, effects and defects of friction stir welds, modelling thermal properties in friction stir welding and metallurgy and weld performance. With its distinguished editors and international team of contributors, Friction stir welding from basics to applications is a standard reference for mechanical welding and materials engineers in the aerospace, automotive, railway, shipbuilding, nuclear and other metal fabrication industries, particularly those that use aluminium alloys. Provides essential information on topics such as basic process overview, materials deformation and joint formation in friction stir welding. Inspection and quality control and friction stir welding equipment requirements are discussed as well as industrial applications of friction stir welding. Reviews the variables involved in friction stir welding including residual stresses, effects and defects of friction stir welds, modelling thermal properties, metallurgy and weld performance.

The Fast, the Fraudulent & the Fatal Michael Bender, 2009-03-18 Stolen vehicles and stolen lives are abundant in this dark and dangerous underground that has taken over our highways and streets all in the name of fun. A fact-filled assault on illegal street racing, drifting, stunting and even car shows often inundated with larceny, deceit, injuries and death. Examines years of hands-on real stories of theft, fraud and the Fast and Fraudulent scene and what can be done to identify problem areas, recover stolen vehicles and parts, identify fraud, save lives, prevent injuries and protect property. This internationally recognized expert has researched every angle of this scene, packing pages with facts, investigative techniques and solutions. Over a decade of hands-on investigations and requests for training on this scene prompted this book. With testimonials including such praises as Mike Bender's presentation concerning the direct link between Street Racing and Auto Crimes, it is without doubt the most comprehensive available world-wide. Mike's direct knowledge and enthusiasm is very evident in the first minutes of his presentation. As a long-time auto crimes investigator and a drag racer, I can attest that Mike's program is filled with current and accurate information. This class is a must for any street officer, auto theft investigator or insurance investigator. A must read for Law Enforcement, Auto Theft Investigators, Insurance Companies, Fraud Investigators.
