1. Unique Features

Power Up Overshoot Suppression

The overshoot is common when controller just power up, and the PV is getting closer to SV, this controller offers a useful features for application where the overshoot should be tolerated

The Figure 1 shows significant overshoot after PV reaches to SV, this is harmful to some of system, MTA offers a feature to suppress the overshoot

LED display and indicator built together on one PCB board

The LED display and LED indicators was built as one panel model of controller with their LED display and LED indicator installed separately, the chance of the malfunction is high. This controller with all the display and indicator units built together on board, makes it easier to install and easy to test with higher reliability.

PV/SV Re-transmission(Optional function)

The PV or SV value can be re-transmitted as analog signal 0~5VDC, 0~10VDC, 4~20mA, and the re-transmission signal can be feed to recorder or digital display

C or F display selectable

This controller offers display based on Celsius and Fahrenheit, can the display be switchable between C and F.

Decimal points for all input signals

The decimal points display is available for all input signals. For TC and RTD sensors, the resolution is 0.1, for analog signal, the resolution is 0.001.

Output restriction for analog output

Controller offers a function when output is analog such as 4~20mA, to maintain a stable system, the output changing rate can be restrained in a certain range, for example, if the output changes from 4mA to 20mA in 1 second, the changing rate is 4mA/S, the changing rate can be restrained within 5%, means in the next seconds, the output only changes between 4mA*(1-5%) to 4mA*(1+5%), which is 3.8mA to 4.2mA.
