Global TV Denise D. Bielby, C. Lee Harrington, 2008-08-17 A reporter for the Los Angeles Times once noted that *I Love Lucy* is said to be on the air somewhere in the world 24 hours a day That *Lucy*'s madcap antics can be watched anywhere at any time is thanks to television syndication a booming global marketplace that imports and exports TV shows Programs from different countries are packaged bought and sold all over the world under the watch of an industry that is extraordinarily lucrative for major studios and production companies In *Global TV* Denise D Bielby and C Lee Harrington seek to understand the machinery of this marketplace its origins and history its inner workings and its product management In so doing they are led to explore the cultural significance of this global trade and to ask how it is so remarkably successful despite the inherent cultural differences between shows and local audiences How do culture specific genres like American soap operas and Latin telenovelas so easily cross borders and adapt to new cultural surroundings Why is *The Nanny* whose gum chewing star is from Queens New York a smash in Italy Importantly Bielby and Harrington also ask which kinds of shows fail What is lost in translation Considering such factors as censorship and other such state specific policies what are the inevitable constraints of crossing over Highly experienced in the field Bielby and Harrington provide a unique and richly textured look at global television through a cultural lens one that has an undeniable and complex effect on what shows succeed and which do not on an international scale

Populating the Future Britt Johanne Farstad, 2023-07-19 Speculative fiction opens doors for imagining beyond what is possible conventional or acceptable Speculative fiction has an acute ear for the social the scientific and for political developments and change all of which are prominent topics Reproduction and parenthood are pertinent social questions that are constantly renegotiated in various arenas By investigating representations of family making and reproduction in speculative fiction the research presented in *Populating the Future Families and Reproduction in Speculative Fiction* not only

adds to the field of speculative fiction scholarship but also contributes to the more general discussion about reproduction and parenting. Speculative fiction operates as thought laboratories that make connections between discourses visible. It highlights power structures that can be difficult to detach and represents difficult and abstract issues more concretely. As such, speculative fiction demonstrates the complex entanglement of reproduction with issues of gender, power, and agency. By facilitating thought experiments and illustrating alternatives, speculative fiction also enables the representation of new family structures and reproductive technologies, thus paving the way for discussions about various practices and their possible consequences. Due to its multidisciplinary approach, this book will be of value to scholars and students of various disciplines such as literature studies, philosophy, ethics, political science, the social sciences, and gender studies. It will also be a useful resource in teacher training programmes as well as to a more general audience interested in speculative literature, politics, society, gender, and ethics.

Reasoning in Biological Discoveries Lindley Darden, 2006-06-26. Reasoning in Biological Discoveries brings together a series of essays which focus on one of the most heavily debated topics of scientific discovery. Collected together and richly illustrated, Darden's essays represent a groundbreaking foray into one of the major problems facing scientists and philosophers of science. Divided into three sections, the essays focus on broad themes, notably historical and philosophical issues at play in discussions of biological mechanism and the problem of developing and refining reasoning strategies, including interfield relations and anomaly resolution. Darden summarizes the philosophy of discovery and elaborates on the role that mechanisms play in biological discovery. Throughout the book, she uses historical case studies to extract advisory reasoning strategies for discovery. Examples in genetics, molecular biology, biochemistry, immunology, neuroscience, and evolutionary biology reveal the process of discovery in action.
