Covering and Surrounding Glenda Lappan, James T. Fey, William M. Fitzgerald, Susan N. Friel, Elizabeth Difanis Phillips, 1997 Learn about areas and perimeters of geometric figures **Measuring in One and Two Dimensions** Kathy Harris, Alice Brown, Wilma Godwin, 2007 Measuring in one and two dimensions focuses on the underlying concepts and processes of measurement The North Carolina Standard Course of Study provides the framework from which development ideas have been identified that enable students to make sense of measurement Through selected activities participants develop an understanding of sequential stages students work through as they come to understand one and two dimensional measurement Assessment samples encourage participants to use formative assessment as they plan for instruction Literature selections link measurement to real world applications *Covering and Surrounding* ,2004 **Measuring Shape** F. Brent Neal, John C. Russ, 2017-03-29 John Russ is the master of explaining how image processing gets applied to real world situations With Brent Neal he s done it again in *Measuring Shape* this time explaining an expanded toolbox of techniques that includes useful state of the art methods that can be applied to the broad problem of understanding characterizing and measuring shape He has a gift for finding the kernel of a particular algorithm explaining it in simple terms then giving concrete examples that are easily understood His perspective comes from solving real world problems and separating out what works in practice from what is just an abstract curiosity Tom Malzbender Hewlett Packard Laboratories Palo Alto California USA Useful for those working in fields including industrial quality control research and security applications *Measuring Shape* is a handbook for the practical application of shape measurement Covering a wide range of shape measurements likely to be encountered in the literature and in software packages this book presents an intentionally diverse set of examples that illustrate and enable readers to compare methods used for measurement and quantitative description of 2D and 3D shapes It stands apart through its focus on examples and applications which help readers quickly grasp the usefulness of presented techniques without having to approach them through the underlying mathematics An elusive concept shape is a principal governing factor in determining the behavior of objects and structures Essential to recognizing and classifying objects it is the central link in manmade and natural processes Shape dictates everything from the stiffness of a construction beam to the ability of a leaf to catch water to the marketing and packaging of consumer products This book emphasizes techniques that are quantitative and produce a meaningful yet compact set of numerical values that can be used for statistical analysis comparison correlation classification and identification Written by two renowned authors from both industry and academia this resource explains why users should select a particular method rather than simply discussing how to use it Showcasing each process in a clear accessible and well organized way they explore why a particular one might be appropriate in a given situation yet a poor choice in another Providing extensive examples plus full mathematical descriptions of the various measurements involved they detail the advantages and limitations of each method and explain the

ways they can be implemented to discover important correlations between shape and object history or behavior This uncommon assembly of information also includes sets of data on real world objects that are used to compare the performance and utility of the various presented approaches Covering and Surrounding Glenda Lappan,James T. Fey,William M. Fitzgerald,Susan N. Friel,Elizabeth D. Phillips,1995-01 Provides experience for students in mathematical problem solving by working with concepts in area and perimeter Covering and Surrounding ,2006
