The Problem with Solutions Julie Guthman,2024-08-06 A concise and feisty takedown of the all style no substance tech ventures that fail to solve our food crises Why has Silicon Valley become the model for addressing today s myriad social and ecological crises With this book Julie Guthman digs into the impoverished solutions for food and agriculture currently emerging from Silicon Valley urging us to stop trying to fix our broken food system through finite capitalistic solutions and technological moonshots that do next to nothing to actualize a more just and sustainable system The Problem with Solutions combines an analysis of the rise of tech company solution culture with findings from actual research

on the sector's ill informed attempts to address the problems of food and agriculture. As this seductive approach continues to infiltrate universities and academia, Guthman challenges us to reject apolitical and self gratifying techno solutions and develop the capacity and willingness to respond to the root causes of these crises. Solutions she argues are a product of our current condition, not an answer to it. *Creating the Market University* Elizabeth Popp Berman, 2012-01-08. Academic science in the U.S. once self consciously avoided the market. But today it is seen as an economic engine that keeps the nation globally competitive. *Creating the Market University* compares the origins of biotech entrepreneurship, university patenting and university industry research centers to show how government decisions shaped by a new argument that innovation drives the economy transformed academic science. Provided by publisher. **Civic Innovation in America** Carmen Sirianni, Lewis Friedland, 2001-07-01. In this book two leading experts on community action provide the first scholarly examination of the civic renewal movement that has emerged in the United States in recent decades. Sirianni and Friedland examine civic innovation since the 1960s as social learning in four arenas: community organizing, development, civic environmentalism, community health and public journalism, and they link local efforts to broader networks and to the development of public policy for democracy. They also explore the emergence of a movement for civic renewal that builds upon the civic movements in these four arenas. In contrast to some recent studies that stress broad indicators of civic decline, this study analyzes innovation as a long process of social learning within specific institutional and policy domains with complex challenges and cross currents. It draws upon analytical frameworks of social capital, policy learning, organizational learning, regulatory culture, democratic theory and social movement theory. The study is based upon interviews with more than 400 innovative practitioners as well as extensive field observation, case study, action research and historical analysis.

Democracy, Dialogue, and Environmental Disputes Bruce A. Williams, Albert R. Matheny, 1998-04-01. At every level of government, environmental regulation is under siege. In Washington it has been attacked first through the New Federalism and now through the Contract with America. Outside the capital, environmental regulation is the subject of controversy as state and local officials struggle with new responsibilities, threats of industry exit and challenges from grassroots groups. This book addresses the conundrum of regulation by tracing its source to the competing characterizations of regulatory legitimacy that have accompanied the growth of the American state. Bruce Williams and Albert Matheny identify three distinct languages: managerial, pluralist and communitarian, used to articulate competing visions of regulation. They argue that each language posits a different understanding of the public interest and therefore a different relationship between the state, the market and the public. Because all three languages are invoked in regulatory debates, disputants talk past one another, leaving fundamental issues of legitimacy and democracy unresolved or masked by unexamined assumptions. The authors propose a dialogic model for analyzing regulatory policymaking, drawing on postmodernist theory that claims that establishing single languages for understanding the world inevitably distorts communication. They then apply their analysis to case studies of

actual environmental disputes over hazardous waste regulation in the 1980s and 1990s in New Jersey Ohio and Florida
