The book also analyzes the fingerprint features of a selected number of surround and more importantly stereo microphone techniques in depth by measuring their signal cross correlation over frequency and also using an artificial human head. In addition the book presents a rating of microphone techniques based on the assessment of various acoustic attributes and merges the results of several subjective listening tests including those conducted by other researchers. Building on this knowledge it provides fresh insights into important microphone system features from stereo to 3D audio. Moreover it describes new microphone techniques such as AB, PC, ORTF, T and BPT and the recently defined BQIrep Binaural Quality Index of reproduced music.
