

Basis for healthcare ethics

Developing ideal guiding standards of healthcare is a challenging task. There are several alternative perspectives. The standards of 'principlism' are common in the sense that healthcare delivery is based on four principles including justice, non-maleficence autonomy, and beneficence (Gert, 2004).

Modern worldly bioethics base on autonomy as the superseding value, although many other critics indicate the impracticality and risks in this approach. Specifically, the likely outcomes of the approach of autonomy are the tendency towards a market representation of healthcare structure, a condition that contradicts the conventional principles of medicine (Beauchamp, & Walters, 1999). Besides, it contradicts the facts of life for sufferers of chronic and disabling illnesses, or who are wholly reliant on others for their routine necessities.

Determining who gets what is the core concern for medical ethics. In circumstances of limited healthcare resources, allocation of resources will be based on need, or paying ability, or prospect for profitable productivity, or other certain criteria. The question of who determines patient's treatment is also important, wherein whether or not the patient's treatment be decided by the physician or the managers or other relevant persons (Grinnell, 2004, p. 1213).

Also, whether or not every person has the right of access to healthcare services poses a challenge for the policy makers (Hope, 2004). For instance; should criminals or heavy smokers have right to receive transplants even when they are scarce. Moreover, a question whether or not cosmetic surgery should be supported with public funds emerges.

Healthcare as a right for every person implicate that people have unlimited access to it, that healthcare ought to be funded through taxes. Another factor that establishment of healthcare ethics considers whether means-tested healthcare ought to or not be provided. A question of imposing health care insurance and at what define income level, on all healthcare consumers is as well challenging.

The aforementioned ethical questions vary amongst different countries and states in countries, and is a complex process altogether. Noteworthy, the supposition and values underpinning fiscal and management choices should be identified and analyzed.
