

Grade 11 Probability

In this chapter you:

- Revise the language of probability
- Use Venn diagrams showing two events to determine probabilities
- Identify independent and dependent events
- Use 2-way tables to determine probabilities of events happening
- Investigate the multiplication law for probability
- Use tree diagrams to determine probabilities of events happening
- Use Venn Diagrams showing three events to determine probabilities.

WHAT YOU LEARNED ABOUT PROBABILITY IN GRADE 10

In Grade 10 you covered the following probability concepts:

- *The use of probability models to compare the relative frequency of events with the theoretical probability*
- *The use of Venn diagrams to solve probability problems*
- *Rules for any two events A and B in sample space S:*
 - $P(A \text{ or } B) = P(A) + P(B) - P(A \text{ and } B)$
 - *A and B are mutually exclusive if $P(A \text{ and } B) = 0$*
 - *A and B are complementary if they are mutually exclusive*
And $P(A) + P(B) = 1$
Or $P(B) = P(\text{not } A) = 1 - P(A)$
Or $P(A) = P(\text{not } B) = 1 - P(B)$

THE LANGUAGE OF PROBABILITY

- ✓ *A statistical experiment is one in which there are a number of possible outcomes and we have no way of predicting which outcome will actually occur.*
- ✓ *A sample space is the set of all the possible outcomes in an experiment.*

Research for Educational Change Jill Adler, Anna Sfard, 2016-06-17 Research for Educational Change presents ways in which educational research can fulfil its commitments to educational practice Focussing its discussion within the context of mathematics education it argues that while research generated insights can have beneficial effects on learning and teaching the question of how these effects are to be generated and sustained is far from evident The question of how to turn research into educational improvement is discussed here in the context of learning and teaching hindered by poverty and social injustice In the first part of the book four teams of researchers use different methodologies while analysing the same corpus of data collected in a South African mathematics classroom In the second part each of these teams makes a specific proposal about what can be done and how so that its research generated insights have a tangible beneficial impact on what is happening in mathematical classrooms Combining two discourses that of researchers speaking to one another and that of researchers communicating their insights to those responsible for educational practice the book deals with the perennial question of communication between those who study educational processes and those who are directly responsible for teacher education educational research and classroom practices This book will be key reading for postgraduates researchers and academics in education and particularly in the areas of mathematics education education research teacher education and classroom practice It will also appeal to teacher educators practitioners and undergraduate students interested in educational research

Mathematical Mindsets Jo Boaler, 2015-11-02 Banish math anxiety and give students of all ages a clear roadmap to success Mathematical Mindsets provides practical strategies and activities to help teachers and parents show all children even those who are convinced that they are bad at math that they can enjoy and succeed in math Jo Boaler Stanford researcher professor of math education and expert on math learning has studied why students don't like math and often fail in math classes She's followed thousands of students through middle and high schools to study how they learn and to find the most effective ways to unleash the math potential in all students There is a clear gap between what research has shown to work in teaching math and what happens in schools and at home This book bridges that gap by turning research findings into practical activities and advice Boaler translates Carol Dweck's concept of mindset into math teaching and parenting strategies showing how students can go from self doubt to strong self confidence which is so important to math learning Boaler reveals the steps that must be taken by schools and parents to improve math education for all Mathematical Mindsets Explains how the brain processes mathematics learning Reveals how to turn mistakes and struggles into valuable learning experiences Provides examples of rich mathematical activities to replace rote learning Explains ways to give students a positive math mindset Gives examples of how assessment and grading policies need to change to support real understanding Scores of students hate and fear math so they end up leaving school without an understanding of basic mathematical concepts Their evasion and departure hinders math related pathways and STEM career opportunities Research

has shown very clear methods to change this phenomena but the information has been confined to research journals until now Mathematical Mindsets provides a proven practical roadmap to mathematics success for any student at any age HC 258 - Academies and Free Schools Great Britain. Parliament. House of Commons. Education Committee,2015 The landscape of schooling in England has been transformed over the last five years Academy sponsorship has encouraged and facilitated the contribution of individuals not previously involved in education provision and laid down a challenge to maintained schools to improve or face replacement by the insurgent academy model The development of outstanding Multi Academy Trusts like Ark and Harris offers an alternative system to the one overseen by local authorities while the unified Ofsted inspection regime and published performance data generally allows fair judgment of comparative performance There is a complex relationship between attainment autonomy collaboration and accountability Current evidence does not allow the Committee to draw conclusions on whether academies in themselves are a positive force for change This is partly a matter of timing but more information is needed on the performance of individual academy chains Most academy freedoms are in fact available to all schools and Committee recommends that curriculum freedoms are also extended to maintained schools *The Boy Crisis* Warren Farrell,John Gray,2018-03-13 What is the boy crisis It s a crisis of education Worldwide boys are 50 percent less likely than girls to meet basic proficiency in reading math and science It s a crisis of mental health ADHD is on the rise And as boys become young men their suicide rates go from equal to girls to six times that of young women It s a crisis of fathering Boys are growing up with less involved fathers and are more likely to drop out of school drink do drugs become delinquent and end up in prison It s a crisis of purpose Boys old sense of purpose being a warrior a leader or a sole breadwinner are fading Many bright boys are experiencing a purpose void feeling alienated withdrawn and addicted to immediate gratification So what is The Boy Crisis A comprehensive blueprint for what parents teachers and policymakers can do to help our sons become happier healthier men and fathers and leaders worthy of our respect *How Chinese Acquire and Improve Mathematics Knowledge for Teaching* Yeping Li,Rongjin Huang,2018-05-16 While the importance of knowledge for effective instruction has long been acknowledged and the concept and structure of mathematics knowledge for teaching are far from being new the process of such knowledge acquisition and improvement remains underexplored empirically and theoretically The difficulty can well associate with the fact that different education systems embody different values for what mathematics teachers need to learn and how they can be assisted to develop their knowledge To improve this situation with needed consideration about a system context and policies *How Chinese Acquire and Improve Mathematics Knowledge for Teaching* takes a unique approach to present new research that views knowledge acquisition and improvement as part of teachers life long professional learning process in China The book includes such chapters that can help readers to make possible connections of teachers mathematical knowledge for teaching in China with educational policies and program structures for mathematics teacher education in that system context *How Chinese Acquire and Improve Mathematics Knowledge for*
