Each chapter compiles the mode of food preservation, basic terminologies, and sequential steps of treatments, including types of equipment required. In addition, chapters present how preservation method affects the products' reaction kinetics and selected prediction models related to food stability, what conditions need be applied for best quality and safety, and applications of these preservation methods in different food products. This book emphasizes practical, cost-effective, and safe strategies for implementing preservation techniques for wide varieties of food products. Features include: extensive overview on the postharvest handling and treatments for foods of plants and animal origin; Describes comprehensive preservation methods using chemicals and microbes such as fermentation, antimicrobials, antioxidants, pH lowering, and nitrite; Explains comprehensive preservation by controlling of water structure and atmosphere such as water activity, glass transition state, diagram, drying, smoking, edible coating, encapsulation, and controlled release; Describes preservation methods using conventional heat and other forms of energy such as microwave, ultrasound, ohmic heating, light irradiation, pulsed electric field, high pressure, and magnetic field.
