

Don't Leave The Dock Without It

Monitors Your Engines Heartbeat

FloScan serves as a watchdog on engine performance. For example, if your GPH increases from what you've already determined to be an efficient operating level, you'll know something's amiss... a nicked prop, fouled hull, clogged injector, engine problem, etc. Even something as simple as a defective spark plug can up your fuel consumption by 20% - 40%, with no noticeable change in engine operation.

Peak Fuel Efficiency

Accurate fuel consumption and boat speed data allow you to determine peak fuel efficiency. As shown in the opposite diagram, peak fuel efficiency changes constantly according to sea conditions, boat characteristic, trim tab setting, and weight load/distribution. FloScan allows you to pinpoint the engine speed that will cover the most ground with the least amount of fuel consumed under any load or operating condition. No other piece of marine equipment allows you to master this procedure as quickly or effectively than FloScan.

Model Selection and Installation Tips

Gasoline Models

Gas models are the easiest to specify and install. We fit the following engine types:

- ALL carbureted Inboard, I/O, and Outboard gas engines.
- ALL 2-stroke and 4-stroke EFI Outboard gas engines.
- ALL DFI gas O/B engines including Mercury Optimax™ and Evinrude E-Tech™.
- ALL EFI Inboard and I/O gas engines with closed loop return fuel systems such as Mercruiser™ and Volvo™ engines.

NEW! FloScan now fits EFI Inboard and I/O engines with fuel return lines that are connected directly to the fuel tank such as Crusader™, Marine Power™, PCM™, SeaMaxx™ and Kodiak™ EFI engines. Flow sensors are installed on the feed and return fuel lines to measure the net burn rate of the engine. See Series 5800 CruiseMaster section for more info.

When selecting a gas CruiseMaster or TwinScan model, use the following formula to determine the correct GPH scale (HP rating x 10% = maximum GPH). Example: 200 hp x 10% = 20 GPH. Select the CruiseMaster model with the 0-20 GPH scale or TwinScan model with 0-24 GPH scale. Multifunction and GPS Interface Models do not require scaling since they incorporate a digital display which reads up to 999 GPH. Make sure to select proper flow sensor type (20B/231/233 Series) for your application.

Flow sensors are typically installed in-line after the filter for added protection from fuel tank debris. With certain EFI engines such as Mercruiser, the flow sensor can only be installed before the filter. Adding a basic (coarse) filter element before the sensor provides adequate protection.

All models require a panel mounted SPST (ON/OFF) switch for resetting the totalizer. Series 7000 gas models require two additional SPST switches for selecting Port or Sbd GPH and Engine Hour Time or Engine Synch. Series 9000 gas models require a third SPST switch for selecting GPH or nautical MPG.

Diesel Models

Diesel models are based on the type of fuel delivery system used and each engine requires a dedicated FloScan system. These engines use a variety of fuel pumps including rotary, in-line, and direct injection systems. Flow sensor selection is based on the feed and return flow rates associated with the engine. Flow sensors are installed on the feed and return lines to display net flow rate and total fuel consumption. Certain engines which use the return fuel to cool injectors will require fuel temperature compensation to ensure accurate flow measurement. These engines include Detroit Diesel™, BMD™, and CAT™ 3100/3500 Series engines and are limited to the Series 7000 and 9000 Multifunction Systems only. All models require a panel mounted SPST (ON/OFF) switch for resetting the totalizer. Series 9000 diesel models require an additional SPST switch for selecting GPH or nautical MPG.

NEW! Easier-to-Install Series K Diesel System

The new Series K Diesel System represents a major breakthrough in diesel fuel management. The Series K system cuts the installation time and cost in half over previous diesel models. Separately mounted pulsation dampers are no longer required. New flow sensor design also enhances system performance and accuracy. Simplified procedures allow for do-it-yourself installation. Models available for diesel engines from 25 to 4300 hp.
