Digital Curricula in School Mathematics Meg Bates,Zalman Usiskin,2016-02-01 The mathematics curriculum what mathematics is taught to whom it is taught and when it is taught is the bedrock to understanding what mathematics students can could and should learn Today s digital technology influences the mathematics curriculum in two quite different ways One influence is on the delivery of mathematics through hardware such as desktops laptops and tablets Another influence is on the doing of mathematics using software available on this hardware but also available on the internet calculators or smart phones These developments rapidly increasing in their availability and decreasing in their cost raise fundamental questions regarding a mathematics curriculum that has traditionally been focused on paper and pencil work and taught in many places as a set of rules to be practiced and learned This volume presents the talks given at a conference held in 2014 at the University of Chicago sponsored by the Center for the Study of Mathematics Curriculum The speakers experts from around the world and inside the USA were asked to discuss one or more of the following topics changes in the nature and creation of curricular materials available to students transformations in how students learn and how they demonstrate their learning rethinking the role of the teacher and how students and teachers interact within a classroom and across distances from each other The result is a set of articles that are interesting and captivating and challenge us to examine how the learning of mathematics can and should be affected by today s technology

Learning Over Time Alan P. Maloney,Jere Confrey,Kenny H. Nguyen,2014-06-01 The driving forces behind mathematics learning trajectories is the need to understand

how children actually learn and make sense of mathematics how they progress from prior knowledge through intermediate understandings to the mathematics target understandings and how to use these insights to improve instruction and student learning In this book readers will come to understand what learning trajectories are the research and methodology that are necessary for developing them and gain insight into potential applications of learning trajectories A synthesis and research outcome in their own right learning trajectories provide detailed description of instructionally grounded development of mathematical concepts and reasoning from the perspective of student learning and overall building on decades of accumulated experience in mathematics education research However their greater importance may lie in their potential as frameworks that contribute an unprecedented coherence across classroom instruction professional development standards and assessment by focusing squarely on conceptual understanding and reasoning instead of assessment driven procedural knowledge This potential was sufficiently compelling as an organizing framework to have been cited as a basis for the Common Core mathematics standards the new mathematics learning expectations that are now consistent across most of the United States Among the conference attendees were the writers of the Common Core State Standards for Mathematics at the beginning of the Standards drafting process This book is an outgrowth of a conference on learning trajectories hosted in 2009 at North Carolina State University which examined research on learning trajectories An overarching message of the chapters in this volume is that learning trajectories by focusing on how children's mathematical reasoning develops are coming into their own as a rigorous underpinning for both instruction and accountability Some of the learning scientists featured in this volume have played major roles learning trajectories evolution from small scale day to day conjectures by individual teachers to systematic research endeavors that teachers and scientists alike can use to interpret standards plan instruction and formatively assess student work The work in this volume will be of interest to mathematics educators teachers and professional development specialists
