Global Forest Monitoring from Earth Observation Frederic Achard, Matthew C. Hansen, 2016-04-19 Covering recent developments in satellite observation data undertaken for monitoring forest areas from global to national levels this book highlights operational tools and systems for monitoring forest ecosystems It also tackles the technical issues surrounding the ability to produce accurate and consistent estimates of forest area changes which are needed to report greenhouse gas emissions and removals from land use changes Written by leading global experts in the field this book offers a launch point for future advances in satellite based monitoring of global forest resources It gives readers a deeper understanding of monitoring methods and shows how state of art technologies may soon provide key data for creating more balanced policies

Recarbonizing global soils – A technical manual of recommended management practices Food and Agriculture Organization of the United Nations, Intergovernmental Technical Panel on Soils, 2021-09-07 During the last decades soil organic carbon SOC attracted the attention of a much wider array of specialists beyond agriculture and soil science as it was proven to be one of the most crucial components of the earth's climate system which has a great potential to be managed by humans Soils as a carbon pool are one of the key factors in several Sustainable Development Goals in particular Goal 15 Protect restore and promote sustainable use of terrestrial ecosystems sustainably manage forests combat desertification and halt and reverse land degradation and halt biodiversity loss with the SOC stock being explicitly cited in Indicator 15.3.1 This technical manual is the first attempt to gather in a standardized format the existing data on the impacts of the main soil management practices on SOC content in a wide array of environments including the advantages drawbacks and constraints This manual presents different sustainable soil management SSM practices at different scales and in different contexts supported by case studies that have been shown with quantitative data to have a positive effect on SOC stocks and successful experiences of SOC sequestration in practical field applications Volume 2 includes a description of hot spots of SOC stocks This manual defines hot spots of SOC as areas that represent a proportionally little of the global land surface but on which SOC storage is highly effective bright spots as large land areas with low SOC stocks per km² that represent a potential for further carbon sequestration

THE STATE OF THE WORLD'S FOREST GENETIC RESOURCES Food and Agriculture Organization of the United Nations, 2018-05-25 The publication was prepared based on information provided by 86 countries outcomes from regional and subregional consultations and commissioned thematic studies It includes an overview of

definitions and concepts related to Forest Genetic Resources FGR and a review of their value a description of the main drivers of changes the presentation of key emerging technologies an analysis of the current status of FGR conservation use and related developments recommendations addressing the challenges and needs By the FAO Commission on Genetic Resources for Food and Agriculture Evaluating Forest Cover and Fragmentation in Costa Rica with a Corrected Global Forest Map Daniel Louis Cunningham, 2019 Global forest cover products are widely used by researchers to examine forests However relatively little is understood about their accuracy and biases and the potential effects of errors in these products on analyses This study assessed the performance of regional and global tree cover products across gradients of precipitation elevation and agricultural cover and quantified how observed biases altered estimates of forest cover and fragmentation A reference dataset was generated to assess tree cover estimation bias in a diverse tropical country Costa Rica Of the products examined only the popular Global Forest Change product showed biases across all three gradients However contrary to expectations the regional forest product did not have the highest accuracy To quantify the impact of biases on analyses observed biases were corrected in the Global Forest Change product After bias correction tropical dry forest cover increased agricultural tree cover declined and forest fragmentation declined

The Second Report on the State of the World's Forest Genetic Resources Food and Agriculture Organization of the United Nations, 2025-03-25 Forests and woodlands provide a huge array of essential benefits for people and the planet such as hosting biodiversity supporting livelihoods protecting soils regulating water cycles and mitigating climate change At the heart of such benefits are forest genetic resources the heritable materials maintained within and among tree and other woody plant species that are of actual or potential economic environmental scientific or societal value These genetic resources underpin the resilience adaptability and productivity of forests and other tree based systems enabling them to withstand environmental stresses and thereby continue providing vital ecosystem services Drawing on data and information from 77 countries representing more than three quarters of the world's forests The Second Report on the State of the World's Forest Genetic Resources provides a global assessment of forest genetic resources It highlights the crucial role of these resources for sustainable development and examines progress in implementing the Global Plan of Action for the Conservation Sustainable Use and Development of Forest Genetic Resources The report reviews scientific advances and concludes with recommendations for continued action at the national regional and global levels to ensure that forest genetic resources are sustainably managed for the benefit of current and future generations
