Global Warming Report:

Global Warming Jeremy K. Leggett, Greenpeace UK., 1990 Global warming has surfaced as the political issue of the nineties. Most of the world's climate scientists concur that global warming has become an undeniable reality. Over 60% of Americans believe that it is something to worry about and more than 70% think that the United States should take a leading role in combating this challenge to the environment. Yet the United States Government remains reluctant to take the steps necessary to begin treating this devastating environmental problem. Written by the world's leading scientists and energy analysts and commissioned by Greenpeace as a shadow document to the finding of the Intergovernmental Panel on Climate Change (IPCC), *Global Warming: The Greenpeace Report* presents the most authoritative, accessible, and up-to-date report on the subject. The study provides clear, straightforward explanations of what global warming is and how the greenhouse effect works. The contributors, Steven Schneider, David Schimмель, George Woodwell, Amory Lovins, Carlo LaPorta, and Michael Walsh, among them, explain the scientific data, assess its implications, and outline the policies that governments must implement in order to escape what could be the most serious threat our planet has ever faced. They address the ecological trauma, human health problems, and physical devastation resulting from global warming and also demonstrate how we can cut greenhouse emissions without significantly altering the American lifestyle. Unlike other studies on the subject, the Report advocates policies that are consistent with the scientist's warnings. Describing the environmental imperatives and changes crucial to ending the greenhouse threat, *Global Warming: The Greenpeace Report* will be essential reading for policy makers, teachers, and students of environmental studies, political science, and government, and anyone who is concerned about the future of our planet.

The Climate Report U.S. Global Change Research Program, 2019-01-22 To hide its dramatic findings, the government quietly released its mandated Climate Assessment Report on Black Friday 2018. Now this full-color reproduction is the definitive edition of the most comprehensive assessment of the effects of climate change on the United States. The New York Times, which every citizen should own, The US Global Change Research Program (USGCRP) is mandated by law at least every four years to submit to the president and the Congress an assessment regarding the findings of the effects of global change and current and major long-term trends in global change. The report was released by the Trump administration without fanfare in the wake of a series of some of the most devastating hurricanes in American history as well as the horrific California wildfires. As the report says, "The assumption that current and future climate conditions will resemble the recent past is no longer valid. Detailing not only the destructive toll of global warming on the environment but also the related health issues leading to tens of thousands of deaths per year and economic losses of tens of billions of dollars, the report concludes that the evidence of human-caused climate change is overwhelming and continues to strengthen that the impacts of climate change are intensifying across the country and that climate-related threats are rising." *Global Warming of 1.5°C* Intergovernmental Panel on Climate Change (IPCC), 2022-06-09 The Intergovernmental Panel on Climate Change (IPCC) is the

Field Notes from a Catastrophe Elizabeth Kolbert, 2015 _____ A superbly crafted, diligently compressed vision of a world spiralling towards destruction. Observer: Kolbert mesmerises with her poetic cadence in this riveting view of the apocalypse already upon us. Robert F. Kennedy Jr. 'The most frightening book I've read this century.' Times Literary Supplement _____ Elizabeth Kolbert's environmental classic *Field Notes from a Catastrophe* first developed out of a groundbreaking award-winning three-part series in *The New Yorker*. She expanded it into a still concise yet richly researched and damning book about climate change, a primer on the greatest challenge facing the world today. In the years since the story has continued to develop, the situation has become more dire even as our understanding of it grows. Now Kolbert returns to the defining book of her career with new chapters on ocean acidification, the tar sands, and a Danish town that's gone carbon neutral. *Field Notes from a Catastrophe* remains as necessary as ever and a must-read for our moment.

Counting the Cost of Global Warming John Broome, David Ulph, 1992 Since the last ice age when ice enveloped most of the northern continents, the earth has warmed up by about five degrees. Within a century it is likely to warm by another four or five because of the greenhouse gases that we are dumping into the atmosphere. This will have immense and mostly harmful effects on the lives of people not yet born. How much should the present generation be prepared to pay to mitigate these harmful effects? How much should we sacrifice for the sake of the future? In *Counting the Cost of Global Warming*, John Broome surveys the ways in which economists and philosophers have tackled the question of our responsibility to future generations, with special reference to the economic and ethical issues raised by the threat of global warming. His conclusions on the extent to which we are entitled to discount the long-term future make essential reading for economists, philosophers, and social scientists who are concerned with policy in this vital area.

Global Warming – The Research Challenges Atsunobu Ichikawa, 2004-12-09 Of interest to both researchers and policy makers. Suitable for course use.

Global Warming John Houghton, 2009-04-16 John Houghton explores the scientific basis of global warming and the likely impacts of climate change on human society, then addresses the question of what action might be taken by governments, industry, and by individuals to mitigate the effects.
