Hydrogen sulfide (H₂S) is a colorless, odorless, and highly toxic gas. It is produced by the decomposition of organic matter and by the reaction of sulfur with hydrogen. It is a common byproduct of the refining of petroleum and the production of sulfuric acid. It is also found in natural gas, coal, and other fossil fuels. Hydrogen sulfide is highly flammable and can cause severe health effects, including death, if inhaled in high concentrations. It is also highly corrosive and can cause severe skin and eye irritation. It is important to take appropriate safety measures to protect workers from exposure to hydrogen sulfide.

Exposure to hydrogen sulfide can cause a variety of health effects, including irritation of the eyes, nose, and throat, as well as more serious effects such as respiratory distress, loss of consciousness, and death. The severity of the effects depends on the concentration of the gas and the duration of exposure.
