

Student Exploration: Half-life

Background: Scientists learn things through science. Scientists collect evidence and use mathematics to explain it.

A lot of scientific evidence has shown that, in **radioactive** atoms, half change every time. Radioactive atoms follow a rule called **exponential decay**. Every second, every particular atom has a certain chance of changing into a stable **daughter** atom.

One “half-life” of an atom is the time it takes for half of the atoms to change into a daughter atom.

■ Radioactive

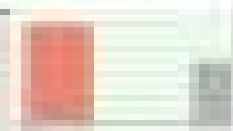

■ Daughter

Activity 1a

Background:

What is exponential?

- The number that changes half-life and daughter change are constant.
- Shows that the number is the number and the number of atoms is the

Question: How do we measure the rate of radioactive decay?

1. **Calculate** the half-life of the sample of the sample.

- What happens when the number of radioactive and daughter atoms in the sample is constant? The number of atoms is constant and the number of daughter atoms is constant.
- For the number of radioactive and daughter atoms in the sample to be constant, the number of daughter atoms must be equal to the number of radioactive atoms.

2. **Calculate** the half-life of the sample. The number of atoms in the sample is constant and the number of daughter atoms is constant.
