Brock,2021-07-13 An innovative up to date field guide to Britain and Ireland s 25 insect orders concentrating on popular groups and species that can be identified in the field **US Marine Corps and RAAF Hornet Units of Operation Iraqi Freedom** Tony Holmes,2012-11-20 The exploits achieved by the units that flew these jets into combat is detailed in this volume the third of three titles published in the Combat Aircraft series on what has been dubbed by many TACAIR insiders the Hornet s War Some 84 of the 250 Hornets committed by Central Command to Operation Iraqi Freedom OIF proudly bore MARINE titling on their rear fuselages A further 14 were marked with the distinctive kangaroo roundel of the Royal Australian Air Force RAAF Although the bulk of this book deals with the major hostilities phase of OIF I which ran from 20 March to 20 April 2003 the decade of pre war OSW missions and ongoing post war OIF II operations are also covered in significant detail from the Marine Corps perspective Profusely illustrated with rare frontline photography and more than 30 specially commissioned colour artworks this book also features the combat experiences of 24 pilots and Weapons Systems Officers **The Complete Asian Giant Hornet for Beginners** Flip Wilson,2025-08-18 What is the Asian Giant Hornet The Asian giant hornet *Vespa mandarinia* is the largest hornet species in the world Originally native to temperate and tropical regions of East and Southeast Asia this insect has gained global attention not only because of its size but also due to its aggressive predation on honeybees its painful sting and its potential as an invasive species Adult queens can grow up to 5 centimeters 2 inches in length while workers typically measure between 3.5 to 4 centimeters about 1.5 inches Its wingspan can reach up to 7.6 centimeters 3 inches making it an intimidating insect to encounter The Asian giant hornet is easily recognizable by its distinctive features It has a large orange yellow head with prominent eyes and powerful mandibles capable of cutting through the exoskeletons of other insects Its thorax is dark brown or black while the abdomen displays alternating bands of black and yellow or orange Unlike honeybees it does not die after stinging and is capable of delivering multiple venomous stings in succession While most hornets serve ecological roles as predators that help control pest populations the Asian giant hornet has earned a somewhat notorious reputation In recent years it has been sensationalized by media particularly after being spotted in North America Dubbed murder hornets by news outlets these hornets are far from indiscriminate killers but the nickname highlights the fear they have inspired among the public due to their size and painful sting Despite the dramatic headlines their behavior is largely defensive unless provoked or disturbed near their nest Hornets including *Vespa mandarinia* belong to the family Vespidae which also includes yellowjackets and paper wasps They are eusocial insects meaning they live in colonies with a well defined social hierarchy that includes queens workers and males Their nests often built underground or in tree hollows can house hundreds of individuals Colonies are established annually with only mated queens surviving through the winter to start new nests in the spring In their native ecosystems

Asian giant hornets are apex insect predators. They primarily feed on other insects especially honeybees, mantises, caterpillars, and beetles. In late summer and early fall, they exhibit a unique behavior known as the slaughter phase, during which a small group of hornets can decimate an entire beehive in a matter of hours. They chew the bee bodies into a paste and carry it back to their nests to feed developing larvae. This makes them a serious concern for both natural bee populations and commercial beekeeping operations. Although generally not aggressive toward humans unless disturbed, Asian giant hornets will fiercely defend their nest if they perceive a threat. Their venom contains neurotoxins, cytolytic peptides, and enzymes that can break down cell membranes, cause extreme pain, and in some rare cases, trigger anaphylactic shock. While fatalities are uncommon, stings have resulted in hospitalizations and occasional deaths in their native regions, particularly in rural areas of Japan and China. In 2019 and 2020, the first verified sightings of Asian giant hornets in North America, specifically in British Columbia, Canada, and Washington State, USA, sparked concern about their potential to establish invasive populations. This led to coordinated eradication efforts and public awareness campaigns aimed at preventing the hornet from spreading beyond its initial discovery zones. Despite the fear they inspire, Asian giant hornets are not inherently evil or unnatural. They are a product of millions of years of evolution and play a complex role in their ecosystems. Like many predatory insects, they help balance insect populations and serve as food sources for larger predators such as birds and mammals.
