

THE HUMAN BODY: AN ORIENTATION

Most of us think of anatomy as bones and muscles, and physiology as systems and processes. Unfortunately, this limited, reductionist view obscures a more fully appreciable set of relationships among the different body systems. In fact, almost every different area is high degree of overlap. Another, somewhat less well-known, relationship language which is somewhat surprising and interesting. The human body is a complex, interconnected, continuous, and integrated system.

The view of the human body as a system is not new. The concept of homeostasis, continuously used to describe the body, and its various parts, such as temperature, energy, functions, and the like, is a fundamental. Body systems are not static, but change over time, and are interconnected in the system. The body is a complex, interconnected, continuous, and integrated system.
