Detailed requirements from different parts of the marine market have been taken into account so that the new type-A hub is suitable for a wide range of applications.

Design tools, such as finite elements, for detailed analysis of all components have resulted in a number of design improvements that significantly improve the strength of the hub and its mating parts to provide a longer service life.

The new hull shape developed with modern CFD tools also reduces drag, which gives benefits in propulsive performance.

Based on this new developed hull, Kamewa type A will cover a range of applications and will be offered in two options, depending on the ship speed. The standard type A hull is ideal for speed up to 30 knots and for higher speed an H hull will be available.

The Kamewa type A is available in N/A-bronze or stainless steel and is optimised for all types of installation, from no ice to highest ice class, throughout the speed range.

Underwater replacement of blades as well as a feathering design are optional features.

The Type A propeller is delivered with a hydraulic system, of up-to-date design with load sensing displacement pumps that limit noise and vibration, and reduce energy consumption.

The components are also easy accessible for maintenance and service.

The Kamewa type A-D system fulfils Naval standards, including shock requirements.

This new type A is suitable for all kind of vessels such as:
