Development of Plug in Drive Train System for Hybrid Electric Motorcycle Mustika Yasti Yasril, 2013 This thesis writing discussed about the study of Development of Plug in Drive Train System for Hybrid Electric Motorcycle Generally Plug in hybrid electric vehicles PHEVs use batteries to power an electric motor and use another fuel such as gasoline or diesel to power an internal combustion engine Beyond battery storage and motor power parallel drivetrain configuration is used to combine the power from the electric motor and the engine allow them to switching between the two based on the

drive profile this is called blended mode or mixed mode The major challenges in order to complete this project is to make sure drivetrain functions very well smooth during switching between modes thus not damaging the engine especially during blended mode To face these challenges it is important to develop drivetrain configuration thus analyze its final velocity power and torque required for each modes A review of literature made on the hybrid drivetrain systems outlines four different modes namely Electric Motor EM mode Internal Combustion Engine ICE mode blended mode and idle mode The configuration shows that each mode has its own functions and characteristics depends on speed demands and also needs at certain circumstances Mechanical coupling used to connects the engine and the electric motor to the drive shafts and before reach final drive there will be continuous variable transmission CVT component which act as main transmission instead of going through several gears to perform gear ratio change As final outcome drivetrain configuration that has been finalized will be used as a benchmark to develop prototype of plug in hybrid drivetrain system thus works well with chassis and control system

Electric Motorcycle
Hans Goodnow,2023 As members of the Saxon Restoration Club we chose to make an electric motorcycle We chose a 2005 Kawasaki Ninja for foundation of our project First we stripped to frame down removing the motor gas tank and all the plastics After multiple different design choices we went with a design that that has separate motor and controller mounts Multiple CAD drawings were created to get a solid layout of the electric bike We used Fusion360 to run multiple stress tests

on our 3D drawings We obtained a 72V battery that is compatible with our 3000W brushless DC motor kit that will be used to power the bike After getting steel we constructed a battery cage and attached it to the bike frame This involved cutting and welding the steel together then adding connections in such a way that it could be bolted to the original tabs on the bike The controller was then bolted to the front of the cage We fabricated a motor mount that was separate from the battery controller mount for the vibration reduction on the battery We created a new front sprocket that uses the old back sprocket but has the same gear ratio as the electric motor kit Once the sprocket was made we could line up where the motor would have to be mounted and attached it to the bike frame After all the hardware was in place we wired the motor controller and reattached the seat and rear plastics

Electric Motorcycles in Thailand Piya Kerdlap, Shabbir H. Gheewala, 2020 Battery electric motorcycles offer the potential to reduce greenhouse gas emissions and fossil fuel consumption in road transportation but result in problem shifting when considering potential environmental impacts during vehicle production and disposal This study evaluates the life cycle environmental impacts of implementing lithium ion and lead acid battery electric motorcycles in Thailand's motorcycle fleet to meet the government's motorcycle energy reduction target of 2 791 kilotonnes oil equivalent compared to conventional motorcycles A stock turnover model is used to determine the market growth of electric motorcycles on the fleet from 2015 to 2030 to meet the energy reduction target The total costs of ownership of each motorcycle are analyzed on a single vehicle basis to compare the cost benefits The results of the study reveal that the environmental performance of an electric motorcycle fleet is sensitive to variations in use phase energy consumption the electricity mix consumed and battery disposal scenarios Realization of Thailand's Power Development Plan can reduce total impacts of the electric motorcycle fleet to global warming by 6% to 10% It is crucial that batteries from electric motorcycles are recycled to avoid 98% of impacts to toxicity Lead acid battery electric motorcycles are a more affordable option for consumers in Thailand compared to conventional motorcycles and lithium ion battery electric motorcycles Recommendations are made to improve the environmental performance of electric motorcycle implementation strategies in Thailand

Riding Range Test Procedure for On-Highway Electric Motorcycles Motorcycle Technical Steering Committee, 2022 This SAE Recommended Practice incorporates dynamometer test procedures that produce riding range estimates for electric motorcycles during stop and go urban riding on surface streets and commuting trips in urban areas that include operation on freeways This is typically done using a coastdown approach by disengaging the engine and assuming all losses are aerodynamic However with inherent losses in an electric motor and no way to fully disengage the motor another approach is to use a on road constant speed Appendix B method for fully electric vehicles to develop dynamometer coefficients The

previous version of this document states that the engine must be disengaged in order to obtain the losses from the system in motion In an electric vehicle there is no way to disengage the motor The range and losses that are obtained are false due to the fact that motor magnetic losses are inherent to the function of the motor even with regeneration backdriving the motor to energize the battery disengaged there are continuous losses in the system The proposed changes would be to use a continuous motion at a constant speed to determine the inherent losses of the system This proposed method may be used in all electrically driven vehicles How to Design an Electric Motorcycle ,2010 Electric Motorcycle Concept ,2010
