A Level

Mark Scheme for June 2022

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

Systems Fabio Roli, Josef Kittler, Terry Windeatt, 2004-09-21 The fusion of di erent information sources is a persistent and intriguing issue It has been addressed for centuries in various disciplines including political science probability and statistics system reliability assessment computer science and distributed detection in communications Early seminal work on fusion was c ried out by pioneers such as Laplace and von Neumann More recently research activities in information fusion have focused on pattern recognition During the 1990s classi erfusionschemes especially at the so called decision level emerged under a plethora of di erent names in various scienti c communities including machine learning neural networks pattern recognition and statistics The d ferent nomenclatures introduced by these communities re ected their di erent perspectives

and cultural backgrounds as well as the absence of common forums and the poor dissemination of the most important results. In 1999 the first workshop on multiple classifier systems was organized with the main goal of creating a common international forum to promote the dissemination of the results achieved in the diverse communities and the adoption of a common terminology thus giving the different perspectives and cultural backgrounds some concrete added value. After five meetings of this workshop there is strong evidence that significant steps have been made towards this goal: researchers from these diverse communities successfully participated in the workshops and world experts presented surveys of the state of the art from the perspectives of their communities to aid cross fertilization.
