Claudia Leacock,Michael Gamon,Joel Alejandro Mejia,Martin Chodorow,2022-06-01 It has been estimated that over a billion
people are using or learning English as a second or foreign language and the numbers are growing not only for English but
for other languages as well These language learners provide a burgeoning market for tools that help identify and correct
learners writing errors Unfortunately the errors targeted by typical commercial proofreading tools do not include those
aspects of a second language that are hardest to learn This volume describes the types of constructions English language
learners find most difficult constructions containing prepositions articles and collocations It provides an overview of the
automated approaches that have been developed to identify and correct these and other classes of learner errors in a number
of languages Error annotation and system evaluation are particularly important topics in grammatical error detection
because there are no commonly accepted standards Chapters in the book describe the options available to researchers
recommend best practices for reporting results and present annotation and evaluation schemes The final chapters explore
recent innovative work that opens new directions for research It is the authors hope that this volume will continue to
contribute to the growing interest in grammatical error detection by encouraging researchers to take a closer look at the
