**3. stomach:** muscular organ which churns food and secretes enzymes and acids for food digestion.

**4. small intestine:** hollow tract where chemical digestion continues and nutrients are absorbed into the bloodstream.

**5. pancreas:** organ which secretes enzymes for starch and protein digestion into the small intestine.

**6. liver:** organ which processes digested food into useful substances for the body, secretes bile for fat digestion, and removes toxins from the blood

**7. gall bladder:** storage sac for bile located on the lower surface of the liver.

**8. colon:** main part of the large intestine which absorbs water from indigestible food.
