Michael G. Pappas, 2012-12-06 One comment often repeated to me by coworkers in the biotechnology industry deals with their frustration at not understanding how their particular roles fit into their company's overall scheme for developing manufacturing and marketing biomedical products Although these workers know their fields of specialty and responsibilities very well whether it be in product research and development regulatory affairs manufacturing packaging quality control or marketing and sales they for the most part lack an understanding of precisely how their own contributory pieces fit into the overall scheme of the corporate biotechnology puzzle The Biotech Business Handbook was written to assist the biotechnologist whether a technician senior scientist manager marketing representative or college student interested in entering the field in building a practical knowledge base of the rapidly expanding and maturing biotechnology segment of the healthcare industry Because biotechnology in the United States and abroad covers many disciplines much of the information presented in this book deals with the biomedical diagnostic aspects of the industry Business subjects for the most part unfamiliar to technically oriented people such as the types of biotechnology corporations their business and corporate structures their financing patent and trademark matters their special legal issues and the contributions of their consultants are treated in a manner designed to make them clear and

understandable
