and Okinotorishima where China and Japan have overlapping territorial claims These intrusions have increasingly involved warships including submarines sometimes acting quite aggressively Japan maintains an extraordinary network of undersea hydrophone arrays connected to shore stations which are typically equipped with electronic intelligence ELINT systems for monitoring identifying and tracking submarine and surface traffic in its internal straits and surrounding seas Some parts of this network are operated jointly with and are of crucial importance to the US Navy Japan s superlative submarine detection capabilities would be of decisive advantage in any submarine engagement But the relevant facilities are relatively vulnerable which makes them very lucrative targets in any conflict This introduces compelling escalatory dynamics including the involvement of US forces and possible employment of nuclear options
