**Cryocoolers 13** Ronald G. Ross, 2007-02-15 The last two years have witnessed a continuation in the breakthrough shift toward pulse tube cryocoolers for long life high reliability cryocooler applications New this year are papers describing the development of very

large pulse tube cryocoolers to provide up to 1500 watts of cooling for industrial applications such as cooling the superconducting magnets of Mag lev trains cooling superconducting cables for the power industry and liquefying natural gas. Pulse tube coolers can be driven by several competing compressor technologies. One class of pulse tube coolers is referred to as Stirling type because they are based on the linear Oxford Stirling cooler type compressor; these generally provide cooling in the 30 to 100 K temperature range and operate at frequencies from 30 to 60 Hz. A second type of pulse tube cooler is the so-called Gifford McMahon type. Pulse tube coolers of this type use a G-M type compressor and lower frequency operation (1 Hz) to achieve temperatures in the 2 to 10 K temperature range. The third type of pulse tube cooler is driven by a thermoacoustic oscillator, a heat engine that functions well in remote environments where electricity is not readily available. All three types are described and in total nearly half of this proceedings covers new developments in the pulse tube arena. Complementing the work on low temperature pulse tube and Gifford McMahon cryocoolers is substantial continued progress on rare earth regenerator materials.

**Spray-Freeze-Drying of Foods and Bioproducts** S. Padma Ishwarya, 2022-04-19. Spray freeze drying (SFD) is a synergistic drying technology that imbibes in it the merits of both spray drying and freeze drying whilst overcoming the limitations of these predecessor technologies. SFD produces uniquely powdered food and pharmaceutical products with porous microstructure and superior quality attributes. Owing to its atomization step and ultra low temperature operation, SFD is a competent drying technique for the production of valuable but sensitive bioactive components. Despite the costs and complexities involved, SFD has a competitive edge over the conventional drying techniques in providing distinctive product attributes. The applications of spray freeze drying in the area of food and bioproducts span across the product categories of instant food powders, dry flavors, active pharmaceutical ingredients, poorly water soluble drugs, probiotics, proteins, enzymes, and vaccines. **Spray Freeze Drying of Foods and Bioproducts: Theory, Applications and Perspectives** is the first exclusive title on this interesting drying technique. It provides a comprehensive understanding of the fundamentals of SFD and its food and pharmaceutical applications. The scope of this book, comprising 12 chapters, has been organized under four major headings: fundamentals of process stages, applications with case studies, recent advancements, and the processing bottlenecks and solutions. **Key Features:** Provides examples and case studies of nuances and intricacies associated with each stage of the spray freeze drying process. Highlights the applications of spray freeze drying in the production of food products including soluble coffee, dairy powders, probiotics, and flavors. Serves as a ready reckoner of characterization methods for spray freeze dried products. Contains 200 illustrations and tabulations. The contents of this book are organized to cater to the knowledge needs of students, academicians, researchers, and professionals in the food and pharmaceutical industry.
