3-ASUFT Audio Source Unit with
Firefighters Telephone

FEATURES

- Up to Eight Channels of Simultaneous, Uninterrupted Digital Communication on a Single Pair of Wires
- Reliable Distributed Amplification
- On-board Storage of Programmed Messages and Tones
- Class A or Class B Operation
- UL and ULC Listed

GENERAL

The XLS1000 Audio and Fire Telephone System consists of a digital audio communication system using distributed amplification, a paging microphone, and a fire fighters telephone. This communication package enables the operator to make fast and accurate evacuation control announcements. The Audio Source Unit also serves as the command center from which the fire fighters activities may be directed.

The XLS1000 audio communication system is comprised of standard modules and components that fit together easily and seamlessly with the XLS1000 Life Safety System.

The XLS1000 Audio and Fire Telephone System takes full advantage of digital technology to provide up to eight channels of uninterrupted audio sources transmitting over a single pair of wires between nodes. Combining the inherent survivability and performance of zoned amplifiers with simplified operator interfaces makes audio system design and operation easy and dependable.

DESCRIPTION

The XLS1000 Audio and Fire Telephone Systems provide the emergency operator with an easy-to-use communication package that enables the operator to make simple, accurate, and fast evacuation control announcements. The XLS1000 Audio System builds from standard modules that fit together easily. Audio components use standard XLS1000 cabinets and power supplies. A single cabinet with audio requires only one 24V standby battery.

Seamless Integration with Standard XLS Components:
The XLS1000 Audio and Fire Telephone System consists of audio equipment such as Audio Source Units (ASUs), telephones, microphones, and audio inputs. The audio control equipment installs in standard XLS1000 fire alarm panels; for example, at the main control panel to provide an emergency operator interface for paging and, optionally, a firefighter's master telephone. Zoned amplifiers also mount in the main control panel and/or in remote nodes. By mounting amplifiers in remote nodes, wire runs and space requirements are reduced at the main control panel.

Audio Source Unit (ASU):
The ASU converts analog signals to digital signals. It samples the analog signal 9600 times per second to provide high-quality reproduction of audio sources. On-board audio memory stores signal tones and/or alarm-alert verbal messages. The ASU has 2 minutes of memory for tone and message storage. The optional 3-ASUMX Memory Expansion Board expands available message memory to 36 minutes.
