Berard, M. Bidoit, A. Finkel, F. Laroussinie, A. Petit, L. Petrucci, P. Schnoebelen, 2013-04-17 Model checking is a powerful approach for the formal verification of software When applicable it automatically provides complete proofs of correctness or explains via counter examples why a system is not correct This book provides a basic introduction to this new technique The first part describes in simple terms the theoretical basis of model checking transition systems as a formal model of systems temporal logic as a formal language for behavioral properties and model checking algorithms The second part explains how to write rich and structured temporal logic specifications in practice while the third part surveys some of the major model checkers available      Intelligent Autonomous Systems Ulrich Rembold, 1995 This text presents the proceedings of a conference on intelligent autonomous systems Papers contribute solutions to the task of designing autonomous systems that are capable of operating independently of a human in partially structured and unstructured environments For specific application these systems should also learn from their actions in order to improve and optimize planning and execution of new tasks      **Visual Navigation** Yiannis Aloimonos, 2013-05-13 All biological systems with vision move about their environments and successfully perform many tasks The same capabilities are needed in the world of robots To that end recent results in empirical fields that study insects and primates as well as in theoretical and applied disciplines that design robots have uncovered a number of the principles of navigation To offer a unifying approach to the situation this book brings together ideas from zoology psychology neurobiology mathematics geometry computer science and engineering It contains theoretical developments that will be essential in future research on the topic especially new representations of space with less complexity than Euclidean representations possess These representations allow biological and artificial systems to compute from images in order to successfully deal with their environments In this book the barriers between different disciplines have been smoothed and the workings of vision systems of biological organisms are made clear in computational terms to computer scientists and engineers At the same time fundamental principles arising from computational considerations are made clear both to empirical scientists and engineers Empiricists can generate a number of hypotheses that they could then study through various experiments Engineers can gain insight for designing robotic systems that perceive aspects of their environment For the first time readers will find the insect vision system presented in a way that can be understood by computational scientists working in computer vision and engineering three complete working robotic navigation systems presented with all the issues related to their design analyzed in detail the beginning of a computational theory of direct perception as advocated by Gibson presented in detail with applications for a variety of problems and the idea that vision systems could compute space representations different from perfect metric descriptions and be used in robotic tasks advanced for both artificial and

*Correctness* Dennis Dams, Ulrich Hannemann, Martin Steffen, 2010-02-12 Why would you read this preface As we start thinking what to write here we wonder who is going to read these words From our perspective

that of writers addressing an audience of readers you are most likely Willem Paul de Roever Willem our main motivation in putting together this Festschrift is to honor you on the occasion of your retirement In terms of scientific ancestry you are a father to two of us and a grandfather to 1 the third and you have had a profound impact on our formation as computer scientists At the personal level we know you as a kind hearted generous person We are grateful to know you in these ways and hope to have encounters with you in many years to come Another likely possibility is that you are Corinne or Joanneke wife or daughter of Willem the two strong pillars on which so much in his life is founded You share the honor respect and love that went into the writing as will be acknowledged by those contributing authors that know you which are almost all Also we would like to thank you for your help in sending us photographs for inclusion in this book and for your encouragement The next option is that you are one of the contributing authors In this case you may wonder why it took us so long to get this work published After all wasn't it almost done already at the retirement event in July 2008 The answer is twofold we gave everyone ample time to revise their submissions in line with the recommendations by the referees and we ourselves took ample time to put

everything together Our hope is that this will be visible in the quality of the final result **Modelling, Analysis and Design**

Schnieder, 2003-07-01 In 1995 the Deutsche Forschungsgemeinschaft DFG the largest public research funding organization in Germany decided to launch a priority program Schwerpunktprogramm in German called Kondisk Dynamics and Control of Systems with Mixed Continuous and Discrete Dynamics Such a priority program is usually sponsored for six years and supports about twenty scientists at a time in engineering and computer science mostly young researchers working for a doctoral degree There is a yearly competition across all disciplines of arts and sciences for the funding of such programs and the group of proposers was the happy winner of a slot in that year The program started in 1996 after an open call for proposals the successful projects were presented and re-evaluated periodically and new projects could be submitted simultaneously During the course of the focused research program 25 different projects were funded in 19 participating university institutes some of the projects were collaborative efforts of two groups with different backgrounds mostly one from engineering and one from computer science There were two main motivations for establishing Kondisk The first was the fact that technical systems nowadays are composed of physical components with mostly continuous dynamics and computerized control systems where the reaction to discrete events plays a major role implemented in Programmable Logic Controllers PLCs Distributed Control Systems DCSs or real time computer
