Disaffection with School Mathematics Gareth Lewis, 2015-12-17 Young peoples disaffection with mathematics is a problem since it is a key factor in disengagement lack of participation progression and attainment Large numbers of young people are becoming effectively lost to mathematics with the result that too many young people are leaving education without the competence in mathematics that they require for successful citizenship Disaffection with School Mathematics reports on an investigation into disaffection with school mathematics undertaken by the author Too little is known about both the nature and the causes of disaffection and in this light the research looks beyond the quantitative study of attitude to investigate the nature of the subjective experience of learning or not learning mathematics Disaffection with school mathematics is characterized as a motivational and emotional phenomenon and Reversal Theory is introduced as a robust theory which is used as an interpretative framework to account for students affective experience of school mathematics and to inform the design of a range of novel methods Overall the book develops and presents a deep description of the landscape of disaffection as experienced by and in the voice of students Some empirical and theoretical implications of the study are discussed

Caught in the Act Cyril Julie, Lorna Holtman, Charles R. Smith, 2019-12-11 The research reported in Caught in the Act draws together the insights gained from a continuous professional development initiative for high school mathematics teachers teaching in low socio economic status and socially challenged environments in South Africa The chapters show the possibilities for enhancing achievement in school mathematics if a strength based approach is adopted to develop teaching with teachers and when their concerns are taken seriously The book demonstrates that the ecological relevance fitness for the context in which teachers are teaching of the

goods developed and distributed by initiatives should be a major consideration to offer hope for sustainable implementation to improve school mathematics education The book is of interest to mathematics teachers school leaders mathematics curriculum advisors policy makers and researchers

**The impact and effectiveness of ministerial reshuffles** Great Britain: Parliament: House of Commons: Political and Constitutional Reform Committee, 2013-06-14 Reshuffles are damaging to the effectiveness of individual Ministers and of Government as a whole They also hinder Parliament's ability to hold Government to account Every time there is a reshuffle it is preceded by months of speculation about who will move where which in itself causes a kind of paralysis within Government The Committee calls for Secretaries of State to be left in post for the length of a Parliament Taken together with the advent of fixed term Parliaments this should enable them to make a real difference Some reshuffling of ministers is inevitable because of resignations and illness but reshuffles have become a habit in the UK The majority of the Committee concluded that there should be a specific Minister in the Cabinet Office who is responsible for ministerial development He or she should oversee ministerial training and appraisal There should also be compulsory training for all new Ministers continuous professional development for experienced Ministers and basic ministerial training for shadow Ministers in the 12 months before the expected date of a general election Outgoing Ministers should handover directly to their successors rather than relying exclusively on the civil service to conduct handovers **22**
